ALWAYS A PROFITABLE CROP TO GROW

Pop Corn should be found in every garden, especially if there are children to enjoy it during the long Winter evenings which bring young people together for social amusement. It is a fact not generally known that Pop Corn pops best when more than one year old, and that when well popped it becomes twenty times its natural size; thus a quart and a half will make nearly a bushel of popped corn. In the illustration will be seen a convenient "popper," which may be bought for a trifle from a hardware store or easily made of wire netting. Did you ever try Pop Corn as a money making crop. You will be surprised at the result. There is always a good market at a fair price, and if you plant my selected stock seed you will be able to sell your crop to planters in your vicinity at a greatly advanced price.

GOLDEN TOM THUMB—The newest and best. Dwarf growing; heavy cropping; sure popper. Beautiful golden color, making a beautiful appearing dish when popped. Nothing ever grown can compare with this strain. Seed to Buckbee for true stock. Postpaid, Pkt. 10c.; ½ pt. 20c.; pt. 30c.; qt. 50c. By express or freight, not prepaid, quart 30c.; 4 qts. \$1.00; peck \$1.75.

BUCKBEE'S SNOWBALL—The finest white variety in existence belonging to the rice family. The best yielder, and far in advance of any other variety, ears averaging six inches in length. Beautiful shape; the best popper. Postpaid, Pkt. 5c.; ½ pt. 15c.; pt. 25c.; qt. 40c. By express or freight, not prepaid, quart 25c.; 4 qts. 75c.; peck \$1.25.

NEW RED BEAUTY—Fine variety. The stalks grow six feet high, and average three to four ears each from five to six inches long and covered with large rice-shaped kernels of a deep red color. Postpaid, Pkt. 5c.; ½ pt. 15c.; pt. 25c.; qt. 40c. By express or freight, not prepaid, quart 25c.; 4 qts. 75c.; peck \$1.25.

QUEEN'S GOLDEN—One of the very best and most prolific varieties grown. Its quality and handsome appearance when popped are very noticeable. It pops perfectly white, and a single kernel will expand to a diameter of nearly one inch. The stalks grow six feet high, and the large ears are produced in abundance. Postpaid, Pkt. 5c.; ½ pt. 15c.; pt. 25c.; qt. 40c. By express or freight, not prepaid, quart 25c.; 4 qts. 75c.; peck \$1.25.

MAPLEDALE PROLIFIC—The stalks grow six feet high, and the ears are all large in size, with grains nearly clear white in color. An average ear measured six and a half inches long and contained 585 perfect kernels. Pops pure paper white, of fine quality. Be sure to include this remarkable variety in your order for Pop Corn. Postpaid, Pkt. 5c.; ½ pt. 15c.; pt. 25c.; qt. 40c. By express or freight, not prepaid, quart 25c.; 4 qts. 75c.; peck \$1.25.

NEW STRIPED OR VARIEGATED—A fancy variety, very showy and of the best quality. Rather large ears, filled out with clear, transparent white kernels, beautifully striped with bright crimson. A good popper. Postpaid, Pkt. 5c.; ½ pt. 15c.; pt. 25c.; qt. 40c. By express or freight, not prepaid, quart 25c.; 4 qts. 75c.; peck \$1.25.

BLACK BEAUTY (New) An extra early variety which pops very large and is the most tender and crisp of all. Although the kernels are black, this color does not seem to show at all when popped, being then a pearly white. This new variety has been bred in Wisconsin and is extremely early, ripening so it may be popped the same season as grown, without kiln drying. Pkt. 10c.; ½ lb. 20c.; lb. 35c.; Postpaid. By express. lb. 20c.; 5 lbs. 90c.; 25 lbs. \$4.00.

TERMS CASH WITH ORDER

ORDER BLANK AND ENVELOPE WHICH YOU WILL ENCLOSE WITH THIS CATALOGUE IN MAKING OUT YOUR ORDER

Orders from Canada and Foreign Countries

add Twenty-five Cents Additional for Postage and Insurance on Each Dollar's Worth of Seeds Ordered.

REMARK—We cannot accept Canadian Postage Stamps.

Shipments We always recommend having plants sent by express, when there is an extra charge, as we can usually send somewhat larger plants, and do not have to wash the soil off the roots (as in the case when mailed). We always try to add enough extra plants of our selection to help pay charges.

Write your list of plants all together (not mixed up with the rest) as to prevent any mistake upon the part of our clerks in filling the order. We do not ship plants to foreign countries unless you so at purchaser's risk.

READ THESE FEW WORDS ABOUT RELIABLE SEEDS

From good seeds only can good crops be grown.

Yet a great many contingencies may arise to prevent the best seeds from giving satisfaction, and for all these reasons we cannot, of course, guarantee or be responsible for a crop, as success is dependent upon natural causes, which are beyond human control. Therefore, we do not warrant in any way, express or implied, the contents, or the description, quality, productiveness, or any other matter of any seeds, bulbs, or plants sold by us, and we will not be in any way responsible for the crop. If the purchaser does not accept these goods on above terms, no sale is made thereof, and he must return them at once, and money will be refunded. Subject to above conditions we make this sale, at the moderate prices at which we sell our goods.

FAIR PLAY GUARANTEE

First—We guarantee that all seeds sold shall reach customers in good condition.

Second—We guarantee to hold ourselves responsible for the safe arrival of all remittances sent us by P. O. Order, Bank Draft, Express Order, or Registered Letter.

Third—We guarantee to deliver free of charge in the United States all garden and flower seeds listed in this catalogue, except those quoted at wholesale prices on pages 2 and 3, and Field Seeds, Grass Seeds, Potatoes, and such other items that are plainly marked to be shipped by Express or Freight at purchaser's expense.

Fourth—We guarantee Buckbee's "Full of Life" Seeds to be just as represented—if they prove otherwise, we will refill the order free of charge, or refund the money paid us for same.

New Parcel Post Law

Does not affect Seeds, Bulbs and Plants so far as the rate of postage is concerned. The rate will be the same as before, 8c per pound.

Buckbee's Greenhouses are the Largest, most Complete, Modern Date Seed and Plant Establishment in America with a thorough Organization for the Prompt and Accurate Execution of Orders. Capacity 7,000 Orders Daily. A hearty welcome is extended to our Patrons and Friends to call and inspect our establishment at all times.

SPECIAL WHOLESALE BULK PRICE LIST OF BUCKBEE'S "FULL OF LIFE" SEEDS

SEEDS BY MAIL—If you want anything sent by mail, postage at the rate of 10c per pound, or 15c per quart, must be added to prices given on pages 2 and 3. The New Parcel Post Law does not affect Seeds, Bulbs, and Plants so far as the rate of postage is concerned, but now allows 20 lbs. to be shipped in one package, instead of 4 lbs. as before.

SEVERAL VARIETIES OF SEEDS ARE SHORT CROP THIS YEAR—ORDER EARLY. On a number of varieties, such as Beans and other items, we can accept orders only in connection with other seeds. For instance we reserve the privilege of declining orders for Beans alone, but we will ship reasonable quantities of Beans when included along with a good general order of vegetable seeds. It is our purpose to protect, as usual, the thousands of customers who annually look to us for a general supply of Buckbee's "Full of Life" Seeds.

ASPARAGUS

German, Spargel; French, Asperge; Spanish, Espárgos; Swedish, Sparrilo.

BUCKBEE'S PERFECTION—This is unquestionably the most valuable new variety and the most satisfactory introduction of recent years. At three years old this variety has yielded at the rate of \$500.00 per acre. In short it has all the qualities demanded for the market and will prove itself to every one who grows it to be true to its name Perfection. It is deliciously tender, extra large, early, uniform, prolific, crisp and white. Pkt. 5c; oz. 10c; 2 oz. 16c; $\frac{1}{4}$ lb. 30c; $\frac{1}{2}$ lb. 55c; 1 lb. \$1.00.

BARR'S MAMMOTH—This fine variety has brought in market thirty cents a bunch, when other Asparagus was selling for ten and fifteen cents. Pkt. 3c; oz. 7c; 2 oz. 12c; $\frac{1}{4}$ lb. 20c; $\frac{1}{2}$ lb. 30c; 1 lb. 50c.

COLUMBIAN MAMMOTH WHITE—Furnishes white shoots which stay white as long as fit for use without earthing up, or any other artificial blanching and can be absolutely depended upon to give 80 to 90 per cent. of white plants. Pkt. 4c; oz. 7c; 2 oz. 12c; $\frac{1}{4}$ lb. 20c; $\frac{1}{2}$ lb. 35c; 1 lb. 60c.

CONOVER'S COLOSSAL—A standard variety of large size and delicious quality. One of the best. Pkt. 2c; oz. 6c; 2 oz. 10c; $\frac{1}{4}$ lb. 15c; $\frac{1}{2}$ lb. 25c; 1 lb. 45c.

DONALD'S ELMIRA—This new variety, called by some Vick's Mammoth, is attracting a great deal of attention throughout the country, originating with Mr. Donald, a leading market gardener of Elmira, N. Y. The stalks are exceptionally tender and succulent. Pkt. 4c; oz. 7c; 2 oz. 12c; $\frac{1}{4}$ lb. 20c; $\frac{1}{2}$ lb. 35c; 1 lb. 60c.

NEW PALMETTO—This new Asparagus, from South Carolina, is now quite extensively grown by Southern gardeners for New York and Philadelphia markets, where it sells at very high prices, owing to its mammoth size and regularity. Although of Southern origin, it is equally well adapted to North or South. Pkt. 4c; oz. 7c; 2 oz. 12c; $\frac{1}{4}$ lb. 20c; $\frac{1}{2}$ lb. 30c; 1 lb. 50c.

ASPARAGUS ROOTS

Every home and kitchen garden should have a bed of Asparagus. The growing popularity which this most delightful and wholesome vegetable has attained the past few years is remarkable. Without question, it is one of the most favorite and profitable garden crops; and makes a return early in the spring before any other out-door crop can be marketed, and when a bed is thoroughly established will yield splendid crops for a number of years.

Best Dwarf Wax Yellow Pod Beans

Buckbee's Rust-Proof Golden Wax

The Standard Wax Variety for General Use.

Our own original stock, unequaled in size, color and quality of pods. In this variety we have a Bean that possesses all the good points of the old favorite, Golden Wax, but is larger in pod and much more prolific; handsome appearance; being of a dark, rich yellow color and of perfect shape. Of grand quality, showing no string or coarseness even when past its best, but is of tender and melting flavor at all stages of its growth. Being so exceedingly prolific, it is not injured by Bean rust. For market gardeners or private families no better variety can be planted. Postpaid, pkt. 8c; $\frac{1}{2}$ pt. 15c; pt. 25c; qt. 40c.

Davis Kidney Wax

Big Money Maker for Gardeners and Truckers.

One of the best for shipping as Snap Beans and of the greatest value as a market variety. The length, uniformly perfect shape and fine color of the pods, and the clear white seed, make this one of the best for canners. It is just what they want, a long, straight, clear white pod which does not discolor in canning. Postpaid, pkt. 7c; $\frac{1}{2}$ pt. 12c; pt. 20c; qt. 35c.

BURPEE'S LIMA

DWARF

Henderson's Bush Lima

Splendid Standard Early Variety.

Valuable variety on account of its earliness and wonderful productiveness, continuing to grow and set pods until stopped by frost. Rich, buttery Limas—the true flavor (even better.) Vines are without runners. Pods short, flat and contain three to five Beans, which are of delicious quality. Postpaid, pkt. 7c; ½ pt. 12c; pt. 22c; qt. 35c.

Dreer's Bush Lima

Popular Variety of Pleasing Quality.

The pods are short but thick, containing three to four very thick short Beans, closely packed. This variety is later in maturing pods than the Improved Bush Lima, but the plants are productive. Beans easily shelled and of excellent flavor if gathered before they become dry. Postpaid, pkt. 8c; ½ pt. 14c; pt. 23c; qt. 38c.

Burpee's Bush Lima

Reliable Variety of Splendid Quality.

Bushes grow 18 to 20 inches high, of stout growth and always erect, yet branching so vigorously that each plant develops into a magnificent circular bush from 2 to 3 feet in diameter. Enormously productive, single plants under favorable circumstances yielding from 200 to 350 pods. Handsome large pods being filled with very large Beans, identical in size and luscious flavor with the well-known Pole Limas. Postpaid, pkt. 8c; ½ pt. 15c; pt. 25c; qt. 40c.

H. M. Gurley, Station "B", Spokane, Wash., writes:—I am well pleased with the seeds ordered from you last year. I won First Premium on Onions, Carrots, Mangels and Beets at Sand Point, Idaho. Also in Spokane at the County Fair.

BUCKBEE'S IMPROVED BUSH LIMA

THE WORLD BEATING BUSH LIMA BEAN.

SUPERIOR QUALITY; EXQUISITE FLAVOR; FINE COLOR; GOOD SHIPPER; HARDY GROWER; ENORMOUSLY PRODUCTIVE; MATURES EARLY; EXCELLENT KEEPER; GOOD SIZE; BEST OF ALL.

This is the very "Newest" in the Bush Lima Bean. It differs from all others in so much as it produces more Beans to a plant, and more plants to the acre than any other Bush Bean ever grown.

In size it is what might be termed intermediate; not so large as the Burpee Bush Lima, but considerably larger than the Henderson's Bush Lima, making it, in our estimation, the finest size for all purposes. The bush is sturdy in habit and about 24 inches high, having good large leaves; it bears its fruit on long spikes in heavy clusters well out from the plant. There are several pods in each cluster—as many as 10 having been counted. Each pod contains on an average of four Beans, though there are more containing five than three, so you see that it is a great improvement over the old-fashioned Bush Limas which oftentimes have only one or two in a pod. Considering the large number of pods on a bush the yield is amazingly enormous. In quality the Bean is par excellence, flavor unsurpassed, and color the very best both before and after cooking.

IT MATURES EXTREMELY EARLY AND IS A CONTINUOUS BEARER UNTIL FROST.

We have been many years perfecting this new variety and can recommend it to our hundreds of thousands of friends and customers as being THE VERY BEST. Send to BUCKBEE for originator's stock seed; we control the entire product of this new variety, which cannot be secured elsewhere. Prices so long as our own growth seed lasts (after which we will have no more to offer.) Postpaid, pkt. 10c; ½ pt. 16c; pt. 27c; qt. 45c.

MANGEL WURTZELS

Any land that will grow a good crop of Corn, will produce a good crop of Mangels or Sugar Beets, and is a surer crop than any other root. Plant 5 pounds of Seed per acre.

BUCKBEE'S MASTODON

The Heaviest Cropping and Largest of All Mangels

It is truly a Mammoth, a single root often weighing 60 pounds each and often 75 lbs. and over: in yield it is enormously productive—1,500 to 1,800 bushels per acre is nothing uncommon on good soil. It grows well above ground and on account of its shape is easily harvested. In length it is about the same as Buckbee's Mammoth Long Red, but is more remarkable for its handsome shape and broad shoulders, the diameter being greater, and in weight much heavier: flesh deep red, fine texture, roots solid, tops small. In fact it combines all the fine points possible to condense in a Mangel of the highest nutritive value, and is without question the best and most profitable Mangel for dairy farmers. This is our pedigree stock—especially selected, and can be relied upon as the best money can buy and our moderate prices place it within the reach of all. Oz. 8c.: $\frac{1}{4}$ lb. 25c.: $\frac{1}{2}$ lb. 35c.: lb. 60c, postpaid.

BUCKBEE'S MAMMOTH LONG RED

A Wonderful Yielder.

A standard and favorite Mangel, producing a very large root, uniformly straight and well formed, weighing from 30 to 40 pounds each, of a beautiful dark red color, wonderfully productive, average 1,000 to 1,500 bushels per acre. Keeping qualities not excelled. Our stock is a great improvement over the old variety. Oz. 5c.: $\frac{1}{4}$ lb. 15c.: $\frac{1}{2}$ lb. 25c.: lb. 40c, postpaid.

GOLDEN TANKARD

The Great Milk Producer.

This distinct variety is a most important addition to our list of roots for stock feeding, as it contains less water and more sugar than most Mangels. Sheep and all other stock thrive wonderfully on it. Oz. 6c.: $\frac{1}{4}$ lb. 18c.: $\frac{1}{2}$ lb. 30c.: lb. 50c, postpaid.

NEW GOLDEN MONARCH

A Splendid Keeper.

This entirely new and distinct Mangel grows to the largest size and is of a beautiful russet yellow color. The flesh is white, firm and sweet, greatly relished by cattle and other stock. Easily lifted, growing more than half above ground, producing enormous crops, and is an excellent keeper. Oz. 6c.: $\frac{1}{4}$ lb. 18c.: $\frac{1}{2}$ lb. 30c.: lb. 50c, postpaid.

CHAMPION YELLOW GLOBE

One of the best for stock feeding. Easily harvested. Oz. 5c.: $\frac{1}{4}$ lb. 15c.: $\frac{1}{2}$ lb. 25c.: lb. 40c, postpaid.

CHAMPION RED GLOBE

Similar to above except in color, which is a light red or pink. Oz. 5c.: $\frac{1}{4}$ lb. 18c.: $\frac{1}{2}$ lb. 25c.: lb. 45c, postpaid.

GIANT OR MAMMOTH JUMBO

BUCKBEE'S SUGAR BEET FOR STOCK FEEDING.

Giant
FEEDING
SUGAR

The great value of Sugar Beets for Stock Feeding cannot be over estimated, analysis having demonstrated the fact that 400 pounds of Sugar Beets are equivalent to 100 pounds of the best hay. They are not as heavy yielders as Mangels, but contain a much larger percentage of saccharine.

Giant Feeding Sugar This magnificent Sugar Beet, while giving nearly as large a yield of easily grown and harvested roots as a crop of Mangels, supplies a food of very much higher nutritive value, the roots for feeding purposes being really more valuable, pound for pound, than those of the very best strains of Sugar Beet, and the yield under equally favorable conditions being more than double. The roots grow partly out of the ground and because of this and their shape the crop can be harvested and stored at less expense than any other root crop. Every farmer should try it. **Oz. 7c; 1/4 lb. 20c; 1/2 lb. 30c; 1 lb. 50c, postpaid.**

Buckbee's New Imperial Sugar This Beet is the result of years of methodical and persevering selection, and rich in organic matter, it gives better results than any other variety. It is extremely rich in sugar, thousands of analyses showing that the percentage of sugar which can be obtained from this variety is about sixteen. Its average yield may be stated as from 12 to 16 tons an acre. Flesh finely grained and very sweet. We sell thousands of pounds each year to the large Stock Growers and Beet Sugar Factories through the country, always with the most satisfactory results. **Oz. 5c; 1/4 lb. 15c; 1/2 lb. 25c; 1 lb. 40c, postpaid.**

German Sugar Beet (Klein Wanzleben.) This variety at the present time has probably a wider cultivation than any other Sugar Beet. While not, as a rule, equal to Buckbee's New Imperial Sugar in saccharine richness, it is considerably more productive. We offer German-grown seed the second year from polarized roots. **Oz. 5c; 1/4 lb. 14c; 1/2 lb. 20c; 1 lb. 35c, postpaid.**

Mrs. E. E. Chandler, R. R. 1, Campbell, Texas, writes:—Received my Seeds and Plants O. K. Am well pleased with them, also the Book "How to Grow Seeds and Flowers" would not take a dollar for it.

Buckbee's Great Dane Cabbage

BUCKBEE'S GREAT DANE—The Hardest Headed Late Cabbage

THE GARDENER'S FAVORITE BEST SHIPPER, AND LONGEST KEEPING CABBAGE.

FOR years large quantities of Danish Cabbage have been imported to our leading American markets, the heads being of such solidity that the demand has been far in excess of the supply, always at a price far above the ruling market rate. To get to the source of this supply we dispatched our European traveler direct to Denmark, and after careful inspection of the Cabbage growing localities came to Amack, the home of the **Great Dane**. We will use Mr. Torgeson's (originator) description, which, to say the least, is too modest to express the sterling qualities of this great Winter Cabbage: "For more than twenty years I have worked in perfecting this variety. Heads are almost as round as a ball, of good size, perfectly solid, very fine grained, of the best quality. Because of its **'great solidity'** of head, and its unequalled keeping and shipping qualities, it has supplanted nearly all other varieties for winter use. It is ahead of any variety grown on this side for shipping and all general uses, and I cannot too highly recommend it to gardeners in your land (America)." We control the entire seed supply and offer the choicest **"Full of Life"** Seed of our own growing at the following reasonable prices. Send to Buckbee for the true **"Great Dane"**. Pkt. 10c; oz. 30c; 2 oz. 55c; $\frac{1}{4}$ lb. 90c; $\frac{1}{2}$ lb. \$1.60; lb. \$3.00.

Martin Diefenbach, Jackson, Mo., writes:—"I thought I would let you know how our Seeds turned out last year bought of you. We had some of the earliest and best Cabbages around here; and we sold some before people thought of Cabbages. The late Cabbage also turned out good—had some that weighed 15 to 17 pounds."

John Matts, Box 34, Ypsilanti, Mich., writes:—"The garden seeds bought of you last spring were all good, the Cabbage were the finest I ever saw; one weighed 45 pounds. There were a good many here to see them and said they were lovely. I shall recommend your 'Full of Life' seeds to every one."

Buckbee's Early Greenback

This variety has had thorough and exhaustive trials in all the great cabbage growing sections of the Union and under varied conditions, both by ourselves and expert market gardeners. The seed is so pure and highbred that practically every plant will produce a fine, hard head. Pkt. 5c; oz. 20c; 2 oz. 35c; $\frac{1}{4}$ lb. 65c; $\frac{1}{2}$ lb. \$1.25; lb. \$2.00.

Enkhuizen Glory

A comparatively new second early variety, very sure heading and of excellent quality. Plant of vigorous growth, with large, rather spreading outer leaves which are noticeably curved. Head globular or very nearly round, very solid and of large size for so early a variety. Pkt. 5c; oz. 25c; 2 oz. 40c; $\frac{1}{4}$ lb. 70c; $\frac{1}{2}$ lb. \$1.30; lb. \$2.50.

Ed. De Berry, R. R. 4, Savannah, Tenn., writes:—"My orders last spring were received promptly and all O. K. I had the finest garden in the country, and the finest Cabbages I ever saw raised in this country. You may expect several orders from this neighborhood."

THE BEST STOCK CARROTS

EVERY FARMER Should plant a few acres of Carrots for Stock food; they are very productive, less liable to disease than many other root crops, and being sown earlier do not interfere so much with the labor in the busy time.

Buckbee's Champion

The World Beating Stock Carrot.

Buckbee's Champion is not, properly speaking, a table Carrot, although the flesh is remarkably firm and sweet. But it is, most emphatically, a Stock Carrot for the farmer and stock raiser, and once used, nothing will take its place. It is the heaviest cropping variety grown, yielding more tons to the acre than any other sort. The flesh is white, crisp, solid and very sweet in flavor. The roots are short and very heavy at the shoulder, rendering them easily harvested. An important feature, also, is that they do not easily break in pulling or storing. The roots frequently measure 15 to 20 inches in circumference, and 25 to 50 tons to the acre is not an extravagant statement as to yield. Weight 10 to 25 pounds each. Our Own Growth, Choicest Northern Home-Grown Pedigree Stock Seed, pkt. 5c; oz. 8c; 2 oz. 15c; ¼ lb. 25c; ½ lb. 40c; lb. 75c.

Buckbee's Majestic

The largest and heaviest cropping and most nutritious yellow variety. The roots are remarkably fine; very symmetrical, of excellent quality, possessing high feeding properties. Pkt. 4c; oz. 8c; 2 oz. 15c; ¼ lb. 25c; ½ lb. 40c; lb. 70c.

MONEY IN CARROTS

IF YOU PLANT THE RIGHT SEED.

There is no better food in Winter for horses and other stock than Carrots cut small, then sprinkled with salt and fed with meal. The yield is enormous; 25 to 50 tons per acre is not unusual. We would particularly recommend that those interested in growing roots for stock feeding write to the Secretary of Agriculture, Washington, D. Buckbee's Early Favorite

Very Popular, Early and Standard Main Crop Variety.

Earliest, surest and preferable variety to grow, surpassing most other varieties. Will stand heat and drought exceptionally well, which is a great point in its favor and makes it most highly desirable in regions where other varieties of Cauliflower have failed to thrive. For planting early and late, for forcing under glass, or growing in open ground, it is always satisfactory. Of dwarf growth, with short outer leaves. Early Favorite has never yet failed to please the most exacting grower and its rapidly increasing popularity is due entirely to its real merit and not to any special effort in its behalf. Give it a trial and we are sure you will never have reason to complain of the results. Pkt. 5c; 1/2 oz. 50c; oz. 95c; 2 oz. \$1.80; 1/4 lb. \$3.50.

Sure Header—Drought Resister—Large Solid Heads of Snowy Whiteness.

The best variety for either market or family purposes, by far the earliest and surest header and the most profitable grown. They can be planted very close together, and the leaves growing upward naturally protect the heads, which, to say the least, are handsome beyond description, measuring fully 12 to 15 inches across, and even more under careful cultivation; are pure snow-white, very close, compact and of the most super or quality. The heads, being so extremely solid and deep, weigh heavier than any early variety. It can be used for early or late Cauliflower, with the full assurance that it is impossible to procure a better or more reliable variety. No grower of Cauliflower can make a mistake by relying on this superb, world-beating variety. Pkt. 15c; 2 pkts. 25c; 1/4 oz. 80c; oz. \$3.00; 2 oz. \$5.50; 1/4 lb. \$10.00.

Originators' French Grown Seed,

And the strain used by gardeners and extensive growers in every large celery district in the United States. No other strain of seed gives such universal satisfaction; and it is without question the most popular and dependable strain of celery grown and the acknowledged leader for early market everywhere. Plants of a yellowish-green color when young, but as they mature the inner stems and leaves turn a beautiful golden yellow, which adds much to their attractiveness and makes the work of blanching much easier. The handsome color, crispness, tenderness, freedom from stringiness and fine nutty flavor of this variety make it only necessary to be tried in order to establish it as the standard of excellence as an early sort. Pkt. 10c; ½ oz. 80c; oz. \$1.50; 2 oz. \$2.60; ¼ lb. \$5.00.

LATE OR MAIN CROP VARIETIES

Country Gentleman This variety is often called the "shoe peg" corn, owing to the arrangement of the crowded kernels which are long and very sweet. Our seed of this variety has been carefully selected and is true to name. It is far ahead in flavor of any of the late varieties. It remains tender and fit for use longer than most sorts, as the ear is enclosed in a thick husk which keeps it "in the milk." The ears average nine inches in length and are borne from two to five and sometimes six on each stalk. The cob is small and very closely packed from tip to butt with slender, pure white kernels of the finest quality. If you try this variety you will like it. Postpaid, Pkt. 7c; ½ pt. 12c; pt. 20c; qt. 30c.

Buckbee's Hickox Popular wherever known. One to two weeks earlier than Evergreen. Large, attractive ear; has a white cob and grain and remains in condition for use a long time. Best sort for drying and canning. Postpaid, Pkt. 7c; ½ pt. 12c; pt. 20c; qt. 30c.

Stowell's Evergreen The best known and most largely planted of all the late varieties. This corn is distinguished by the large ear, the long deep kernels, its rich, sugary flavor and its long keeping qualities. Our seed has been selected for its sweetness, productiveness and large size. No better can be obtained. It is northern grown. Our strain is particularly fine and our price is very reasonable. Postpaid, Pkt. 5c; ½ pt. 10c; pt. 15c; qt. 28c.

Leek

German, LAUCH; French, POIREAU.

Belongs to the Onion family. Sow the seed and care for the young plants as for Onions, but they need more room in order to develop. When the young plant is about the size of a goose quill, transplant to a prepared bed in rows about three or three and one-half feet apart and four or five inches in the row.

NEW FLAG—We offer a very superior stock of this popular variety, so largely grown for Fall and early Winter use. It is of quick strong growth, producing long stems of uniform shape and size, averaging 2 inches through by 10 inches long, blanching beautifully white and of fine, mild flavor. Pkt. 4c; oz. 15c; 2 oz. 25c; ¼ lb. 40c.

ROUEN VERY BEST WINTER—This is the best variety for Winter and Spring use, being very hardy; it keeps well when earthed up. It is of slower growth than American Flag, making immense, stocky stems 6 to 8 inches long. Pkt. 5c; oz. 15c; 2 oz. 25c; ¼ lb. 45c.

The Mango Melon or Vegetable Peach

A splendid novelty of late introduction, very striking in color, most wonderful yielder. (See engraving from nature of a single plant in illustration.) Vines of Mango Melon are somewhat smaller than the Musk Melon, requiring same cultivation. Fruit about the size of an Orange, orange shaped, and a bright orange-yellow color, somewhat russeted. For sweet pickles, pies or preserving they are splendid. In the West and Northwest, where fruit is scarce, they are rapidly becoming popular, as they are easily cultivated, enormously productive, and can be used in every way as the Peach, except that they are not quite as sweet. Pkt. 10c; oz. 25c.

New Garden Lemon

Unexcelled for Canning Purposes.

Certainly one of the greatest novelties of recent introduction. Resembles the vine Peach in manner of growth, but is distinct in that the unripe fruit is striped with very dark green spots, nearly black, and when ripe is not russeted like the Vine Peach. Fruit of shape shown in illustration, a trifle smaller than Vine Peach. Has a finer flesh and most desirable acid flavor, thus dispensing with sliced lemon, which is so important in putting up the Vine Peach. Unexcelled for general canning purposes. Cultivate similar to Musk Melons, in hills three feet apart each way. It is such an enormous yielder that it will prove a very profitable crop to grow for market purposes, and will give unbounded satisfaction for all family uses. True stock seed. Pkt. 10c; oz. 25c.

For only 15 cents we will send one liberal packet each of the two Wondrous Novelties, New Garden Lemon and Mango Melon.

Buckbee's New Strawberry Musk Melon

Flavor Like That of a Strawberry.

This grand Melon was originated by planting the most luscious variety of strawberries between every two rows of a New Hybrid Musk Melon. It grows to be a desirable market size; the fruits weigh from 6 to 8 pounds each. Its outside appearance compares favorably with the green nutmeg of old, turning to a yellowish hue, as it were, over night, when fully ripened. Price, choicest seed of our own growing. Pkt. 10c; oz. 15c; 2 oz. 25c; ¼ lb. 40c; ½ lb. 75c; lb. \$1.25.

Henderson's New Bush MUSK MELON

A VINELESS MUSK MELON THAT CAN BE GROWN IN EVERY GARDEN A MOST VALUABLE NOVELTY

The bush habit of growth of this new variety, enables this melon to be grown in small gardens, where the vine sorts could not be grown for lack of room. The fruits are of the popular "Jenny Lind" type but larger, averaging 5 inches in diameter; they vary somewhat in shape from flattened-round to almost spherical; the ribs are shallow, the surface is dark green, but so densely netted that it appears almost russet colored. The flesh is very deep, edible almost to the rind and is colored light green flushed with salmon towards the center. The seed cavity is small. The quality is superb, lusciously sweet and juicy with a cool gratifying flavor and a delightful aroma. They ripen a little in advance of "Rocky Ford." The plants grow from 15 to 18 inches in length and two or three plants can be grown in a hill 2½ to 3 feet apart. Our stock grown from original headquarters seed. Pkt. 5c; or 4 pkts. for 25c.

New Golden Cassaba Melon

New Golden Cassaba Musk Melon

A great acquisition, and destined to become a standard vegetable just as much so as potatoes or onions. The seed should be sown late in the spring, after all danger of frost is over on moist sandy loam. Do not pick until the light streaks become quite yellow. Store away so they do not touch each other in a cool, dark place. When the rind becomes slightly softened and moist they are ready to eat. Some of the melons will actually keep until February. The seed cavity is small and the flesh thick, of fine texture and juicy and palatable to within one-quarter inch of the skin. The flavor is delicious—almost impossible to describe to do it full justice. There is a decided flavor of pineapple as well as the best known mild musk melon. The skin is mottled dark green and yellow. Pkt. 10c; oz. 25c.

Mrs. Mary K. Morgan, Rodeo, N. Mex., writes:—I wish to say the 1200 pounds of seeds ordered from you last Spring, which included Sugar Cane, Milo Maize, Jerusalem Corn and Sand Vetch has proven perfectly satisfactory.

J. C. Akens, Marksville, La., writes:—The "Full of Life" Seeds I purchased from you this Spring have proven far more satisfactory than any others I have used.

Buckbee's "Full of Life" Melon Seed

The Halbert New Rubber Rind Water Melon.

The Halbert New Rubber Rind Watermelon

The Finest Shipping Melon on Earth.

After years of patient labor and careful breeding, Mr. Halbert, of Texas (from whom we have secured a limited amount of seed) has succeeded in perfecting this grand Melon. Mr. Halbert is a well-known expert on Melons and Melon breeding and the claims made for his new Rubber Rind are not exaggerated because it is his production, but simply a just claim of the Melon's real merits. Shape of fruits, oblong and quite large in size, weighing from 50 to 100 pounds in good seasons and nice soil. Flesh dark red color, sweet and quite tender. Rind very dark green, almost black; very thin and exceedingly tough almost as a piece of rubber, hence the name. Seed large, mostly mottled with black and white; but some seed are white with dark rim around the edge. It is decidedly the handsomest Melon in shape and color of all varieties for shipping purposes. Genuine originator's stock Seed. Pkt. 5c; oz. 12c; 2 oz. 20c; $\frac{1}{4}$ lb. 35c; $\frac{1}{2}$ lb. 65c; lb. \$1.25.

Apple Pie Melon

Makes the Finest Pies.

This is a novelty which will be appreciated in many sections of the country and especially so during seasons when apples are scarce or high in price. The vine and fruit are quite similar to a Water Melon and they are easily grown on any good soil. Each vine produces from five to fifteen fruits, and one of the large size Melons will make as many pies as a half bushel of apples. We have estimated carefully in our field that one vine would produce an average of about 300 lbs. The flesh is white, solid throughout, and of excellent quality for making pies, sauce, preserves, etc., and it resembles apples in flavor. They keep nice and fresh all Winter, so that they can be used at any time and any surplus you may have can be fed to the live stock. In fact, it would pay to raise them for this purpose alone, as they can be kept and fed fresh all Winter. Pkt. 5c; oz. 8c; 2 oz. 15c; $\frac{1}{4}$ lb. 25c; $\frac{1}{2}$ lb. 40c; lb. 75c.

Citron Melons

The Best for Preserves.

RED SEEDED—Used exclusively for preserves. Slightly striped, round. Extremely productive, splendid flavor. Pkt. 5c; oz. 8c; 2 oz. 15c; $\frac{1}{4}$ lb. 25c; $\frac{1}{2}$ lb. 40c; lb. 75c.

GREEN SEEDED—The best of the Citrons; makes beautiful preserves of unsurpassed flavor. Pkt. 5c; oz. 8c; 2 oz. 15c; $\frac{1}{4}$ lb. 25c; $\frac{1}{2}$ lb. 40c; lb. 75c.

Citron Melons.

The Wonderful Fruit for Pies, Preserves, Etc.

New Climbing Water Melon.

New Climbing Watermelon

A Superb Variety. Novel and Attractive.

The vine may be allowed to trail on the ground or may be trained and tied to trellises, etc. The melons are about the size of a Coconut, with seed no larger than apple seed. They are very solid, rich crimson flesh and of the highest quality, perfectly ideal for the home garden. Fruit ripens for a long period, unlike other sorts which ripen their fruit mostly at one time. Pkt. 10c; 3 pkts. 25c.

HUNGARIAN HONEY

Really a Splendid Melon.

The flesh is of an intensely red color absolutely stringless, completely melting in the mouth, and of the same beautiful red color up to within one-fourth of an inch or less of the outer skin. The Melons ripen early, and the vines are healthy and very productive. You should try it. Pkt. 4c; oz. 7c; 2 oz. 12c; $\frac{1}{4}$ lb. 22c; $\frac{1}{2}$ lb. 40c; lb. 75c.

Colorado Preserving

Enormously Productive, Rich Quality.

Makes beautiful, nearly transparent preserves of unsurpassed flavor. Superior to the ordinary preserving Citron in quality. Pkt. 5c; oz. 8c; 2 oz. 15c; $\frac{1}{4}$ lb. 25c; $\frac{1}{2}$ lb. 40c; lb. 75c.

Buckbee's Sure Crop Mushrooms

GROWING MUSHROOMS IS NOT DIFFICULT

GET RELIABLE SPAWN, START RIGHT AND THE RESULTS ARE CERTAIN AND PROFITABLE.

No expensive equipment is, or ever will be necessary for the propagation, in money-making quantities, of Buckbee's Sure Crop Mushrooms. Professional growers have had much to do with spreading the idea that process and equipment are both costly. The plain fact is that anyone who starts right can grow Mushrooms successfully. He must know how to prepare the beds, where to locate them, and how to care for his crop. But the grower of Radishes must know that much about the crop he expects to raise. So that, after all, success in growing Mushrooms is hedged about by no more mystery and difficulty than is the growing of Radishes. An abandoned outhouse, or waste space in one, a shed, a basement or a cellar can be used for growing Mushrooms and will answer the purpose excellently. We know an almost totally blind man, in Chicago, who kept a goodly supply of Mushrooms growing constantly in a corner of the basement of the flat building in which he lived.

WHAT A MUSHROOM GROWER SAYS:

VICTOR PINET, "The Rockefeller of the Mushroom industry in St. Louis," cleared a small place in Uhrig's Cave recently and set out a Mushroom bed. Then he sat in his easy chair and in three months cut \$3,000 worth of Mushrooms from the bed he had planted. Monsieur Pinet is an unskilled laborer. He might, if he had good luck, have earned \$45 a month during the three months he spent cutting \$50 a day worth of fungi from his Mushroom bed.—*St. Louis Post Dispatch.*

Mushrooms can be grown in tubs, in flats, but the culture requires careful attention and the temperature of the room must be kept at an unhealthy degree. A city man, however, can dig a "dug out" on the north side of his house, roof it over with rough boards and grow enough Mushrooms for home use. If he wants to roof over a part of an old deserted quarry he can grow

Buckbee's Sure Crop Mushrooms.

Mushrooms for the market. Contrary to popular belief, the culture of Mushrooms in a cellar is healthful. They absorb all the moisture and keep the cellar dry and the air pure.

On a bed fifty feet square one can do a profitable marketing business.

A bed this size, it is estimated, will yield 10 quarts of Mushrooms a day, about \$5.00 worth. This will pay the butcher, grocer and candlestick maker. A boy or girl ten years old can attend to the bed after it is started. The trouble is in the initial work. Afterwards a Mushroom bed piles up money like a money-lender's interest.

Any cellar, a cave, an old quarry pit, even a dug-out in a city back yard, makes an ideal Mushroom garden. A space the size of an ordinary bed, carefully cultivated, will yield all the Mushrooms that a good-sized family can use.

BUCKBEE'S PEDIGREE LARGE RED WETHERSFIELD

OUR LEADING SPECIALTY.

One of the chief departments of our seed growing business consists of growing Buckbee's Pedigree Red Wethersfield Onion for seed purposes only. Our stock has reached such a high point of merit that it is a household word everywhere that "Buckbee's Pedigree Red Wethersfield Onion Seed is the most reliable and produces more good marketable Onions per acre than any other offered." And, from the many thousands of unsolicited testimonials which we have received from all over the country, we have every reason to believe that the time which we personally spend in our Onion Fields is truly appreciated by our many thousands of customers who stand by us and say: "Buckbee's Seeds Are Full of Life."

There are many strains of this justly celebrated Onion offered, but we venture to say none that can surpass Buckbee's Prize Medal Stock of this famous variety. The various strains, good, bad and indifferent, that are generally offered the unwary planter, come to maturity all the way from August up until as late as October. This unreliability of cropping is very disastrous to most localities.

THE GREATEST OF ALL RED ONIONS.

The seed which we are offering is of the earliest form, grown from hand-sorted bulbs that will produce very large Onions of immense size; 1 1/2 to 2 1/2-pound Onions from seed the first year are of frequent occurrence. Buckbee's Red Wethersfield grows with unusual regularity, scallions being unknown. It is a magnificent keeper. An enormous cropper. 700 to 1,000 bushels have frequently been raised upon a single acre. The shape is accurately shown in the illustration above. In color the skin is a deep rich, purplish red, while the flesh is of a beautiful white, finely grained and of good flavor. Our customers throughout the country endorse it as the best Red Onion ever grown.

NEVER HAS BEEN KNOWN TO FAIL.

We trust no Onion grower who receives our catalogue will fail to try at least a small quantity of Buckbee's Red Wethersfield Onion, for all ought to know how much superior it is to other strains offered. This seed will produce highly-colored, long-keeping Onions, sure to command the highest price in the market. Will yield double the amount of any seed you can secure. WHITE BERMUDA

The bulbs are quite broad and flat in form. The color is not a clear white, as in our American varieties, but rather a pale straw; flesh crisp, solid and mild in flavor and early ripening. Pk. 5c; oz. 15c; 2 oz. 35c; ¼ lb. 60c.

RED BERMUDA

Bulbs of this variety are similar in form and early ripening to the Bermuda White, but grow larger in size, ranging from three to four inches in diameter; very flat and of a light pink color. The flesh is white, slightly suffused with pink. Pkt. 5c; oz. 20c; 2 oz. 38c; ¼ lb. 70c.

CRYSTAL WHITE WAX

This new variety is a large, pure-white, flat onion. During the last two or three years it has become very popular with the large growers of onions in the South, especially in southwest Texas. It does very well under northern conditions and produces one of the mildest and sweetest of them all. It is very fine for slicing, the color being so clear and pure. Pkt. 5c; oz. 25c; 2 oz. 40c; ¼ lb. 75c.

BUCKBEE'S MAMMOTH SILVER KING

Cannot be too highly recommended either for family use, exhibition at Fairs or Exhibitions, or for sale in market, where its size and beauty will prove very striking.

BUCKBEE'S "FULL OF LIFE" ONION SETS

Buckbee's Yellow Bottom.

Buckbee's White Bottom.

Buckbee's Red Bottom.

Bottom Onion Sets

Bottom Onion Sets produce an Onion ready for market or the household from four to six weeks earlier than can be done by sowing the seed and the product of the set is identical with that of the seed. This gives the market gardener ample time to sell his entire crop at the early high prices and permits the sowing of another crop on the land the same year. Every private garden should contain a sowing of sets.

Buckbee's Improved Top Sets

These are planted to produce both early green Onions and large eating Onions. This variety increases by producing sets at the top of the stalk and does not produce seed. By far the most superior variety. They are the best Onions to eat, will yield at least one-third more and ripen much earlier than other Onions. It is the best keeper that we know of, having kept perfectly solid for over a year. We advise early orders as our stock is sure to be exhausted before the season is over. Give this variety a trial. Postpaid, pt. 22c; qt. 40c.

Potato Onion Sets

Potato Onion Sets multiply by division of the parent Bulb and are not grown from Seed.

Buckbee's New Yellow Potato Sets

Potato Onion Sets.

Of excellent quality and size for bunching green; can be ripened for use as pickling Onions; for this latter purpose can be more economically grown than from seed. Keep for a year. The most important quality is earliness, being ready for market several weeks ahead of the rest. Postpaid, pt. 22c; qt. 40c.

PARSNIPS

German, PASTINAKE; French, PANAIS; Spanish, PASTINACA; Swedish, PALSTERNUCKA.

PARSNIPS are one of the few winter vegetables. The roots are perfectly hardy and are improved in flavor by the action of the frost. Roots can be dug during thaws in winter or very early in spring, when a change of food is most relished. They are boiled whole, then sliced thin and fried brown with salt pork. While highly appreciated for the table, the great value of the parsnip for stock feeding is but little known. The roots are very rich in saccharine food, adding to the richness of the milk when freshly dug and fed to cows.

Roots fine size, of good diameter, enabling them to be easily gathered; are exceedingly smooth, the flesh fine grained and of the most excellent quality. ABUNDANCE

Mr. A. L. and
Stella Hickman,
Jewett, Ill., writes:

"We were very well pleased with the result of planting Buckbee's Monte Cristo Water Melon Seed last year. We had some that weighed 65 pounds. We bought 35c worth of seed of you and we raised about four wagon loads—with the side boards on. They were the best melons raised in Cumberland County last year, and the largest also. We carried 85 melons and put them in a room just before a freeze came, and we ate of them till Christmas. We ate our last melon Christmas day."

Thomas Laxton

The Newest Introduction in Extra Large Podded Sweet Wrinkled Peas.

The only rival to the Famous Gradus—as a long-podded extremely early wrinkled Pea. The growth is identical but the pods are a deeper, richer green and square at the end. In the opinion of some experts, Thomas Laxton is even sweeter and finer in flavor, while as the large Peas are of a deeper green they present a more attractive appearance on the table. The crop ripens only three to four days after Gradus. Postpaid, pkt. 8c; ½ pt. 15c; pt. 25c; qt. 45c.

Alderman

The Very Best Second Early Main Crop Variety

This comparatively new Pea is, in many respects, the very best early main crop variety of the valuable Telephone type. The vines grow nearly five feet high, are dark green, vigorous and exceedingly productive. Pods very large, long, dark green, similar to Duke of Albany and about the same in season. The Peas are of largest size and unsurpassed in quality. Market gardeners are demanding the large podded, dark colored sorts which retain their fine appearance even after shipping a long distance. The Alderman answers these requirements and furthermore is the most productive variety of this class. We recommend it unreservedly. Postpaid, pkt. 7c; ½ pt. 15c; pt. 25c; qt. 40c.

Pods form in clusters making very easy sort to pick, and are completely filled with from 6 to 8 large delicious Peas. Send to Buckbee for the Genuine Stock Seed. Postpaid, pkt. 6c; ½ pt. 12c; pt. 20c; qt. 35c.

Horsfords Market Garden

The Great Second Early Sweet Wrinkled Pea for Truckers and Home Use

A first-class wrinkled Pea; second early. Height 24 inches; no sticks. It is a profitable sort for market gardeners, as a single plant has been known to produce more than 150 pods. It is equally good for the home table. The medium sized pods are borne in pairs, and are easily and quickly picked. This variety is said to have yielded more shelled Peas to the acre than any other American sort. Postpaid, pkt. 6c; ½ pt. 10c; pt. 18c; qt. 35c.

Daisy or Dwarf Telephone

Thorobred Main Crop Rich Flavored Wrinkled Pea.

SALSIFY

German, **HAFER WURZEL**; French, **SALSIFY**; Spanish, **SALSIFY BLANCO**.

This really delicious vegetable should be more generally grown. It surpasses for table use, both parsnips and carrots, acquiring, after a good frosting, a decided oyster flavor. The roots should be left in the ground to be dug up during thaws in the Winter and Spring. Salsify is boiled like parsnips or carrots, or is half-boiled and grated, then made into balls which are dipped into batter and fried like oysters.

BUCKBEE'S ALL AMERICA—By far the Very Best Salsify—A truly American variety of the highest merit. Introduced in 1908 and sprang into immediate popularity. The long, white tapering roots are of the most superior quality, excelling by far any variety now on the market. Pkt. 10c; oz. 15c; 2 oz. 25c; ¼ lb. 40c; ½ lb. 75c; lb. \$1.25.

SWISS CHARD or Summer Spinach

Delicata

Delicious Both for Summer and Winter Use.

This beautiful Squash is orange-yellow, splashed and striped with dark green on the outside. The flesh, is rich, dry and particularly fine. For private use we can recommend it as surpassing in richness of flavor any of the large old-fashioned sorts. A desirable feature is its small size; not too large for an ordinary family; is wonderfully solid and heavy, the seed cavities being very small; it is also extremely early (the earliest of any Vine Squash), maturing about the same time as the Summer Squashes, and for early use will doubtless supplant this class on account of its superior dryness and flavor, while its extreme solidity renders it fully as good a keeper as any of the Winter varieties. Pkt. 4c; oz. 8c; 2 oz. 15c; ¼ lb. 25c; ½ lb. 40c; lb. 75c.

IMPORTANT

While Squash Seed cannot be planted as early as some other vegetables, we advise early orders so that you will have the seed on hand ready for planting as soon as weather permits.

BUCKBEE'S "FULL OF LIFE" SQUASH

THE SQUASH is one of the most nutritious and valuable of all our garden vegetables. The summer varieties come to the table early in the season, while the winter sorts can be had in perfection from August until the summer varieties are again in condition. Few farmers appreciate the value of winter squash as a food for stock. An acre of Squash, costing no more to cultivate and much less to secure, will give as much food available for feeding stock as an acre of Corn, and we strongly urge our readers to try a patch for this purpose. The plants are very tender and sensitive to cold, and planting must be delayed until settled warm weather. The general principles of culture are the same as those given for Cucumbers and Melons, but the plants are less particular as to soil. The summer varieties should be planted 4 to 6 feet apart each way, and the winter sorts 8 to 10. Three plants are sufficient for a hill.

New Golden Hubbard

The One Variety of Squash That is Never Troubled by Bugs.

Justly Popular Wherever and Whenever Grown. This is a True Hubbard Squash, Except in Color, which is bright Golden. It ripens its crop very early. The fruits are very uniform in size, weighing from six to eight pounds, and in shape are like the Hubbard. Though maturing early they are wonderfully long keepers, so they can be held over in good condition for Spring use. The shell is warty, hard and strong, and a very beautiful orange-red color, except for a bit of olive green on the blossom end. The flesh is a deep orange, and uniformly so to the end, never having the green tinge so objectionable in other sorts. It cooks

very dry, fine grained and good flavored. Has no superior as a table Squash. Pkt. 5c; oz. 8c; 2 oz. 15c; ¼ lb. 28c; ½ lb. 55c; lb. 81.00.

THE BEST RUTA BAGAS

Are you aware that Ruta Bagas, or Swedish Turnips, are among the most valuable root crops?

AN EMINENT authority on agriculture never made a more truthful statement than when he said: "As compared with hay at \$10 to \$15 per ton, I prefer Ruta Bagas at \$5 per ton." An average yield of 20 to 30 tons to the acre is common.

If sown the last of July or the first of August, they make an excellent pasture for sheep during the fall months, and the bulb or turnip will furnish a rich food for them all winter. All kinds of stock relish and fatten upon them, when fed in combination with hay. Send to Secretary of Agriculture, Washington, D. C., for Special Free Bulletin on Root Crops.

BUCKBEE'S GIANT

This magnificent Ruta Baga, which we first offered in 1890, is unquestionably the most profitable of all Swede Turnips, as well as the hardest, heaviest, best shaped and by far the most productive, a yield of 1,000 bushels per acre and over, under careful cultivation, being of frequent occurrence. Bulbs are somewhat oval in shape, slightly oblong and remain sound and good indefinitely. Flesh is of a beautiful yellow color, always sweet, tender, juicy and nutritious. The finest of all Swedes, and a variety that should be sown in preference to all others. Mr. H. R. Kimball, writes: "Have used Buckbee's Giant Ruta Bagas for a number of years. HULLESS
BARLEY**

BARLEY A SPLENDID NURSE CROP HIGH IN FEEDING VALUES

SUCCESS BEARDLESS BARLEY—Earliest Barley known. The straw is about the height of common Barley, but better, and will stand up on any land. This is beardless and as easy to grow and handle as Oats, and is a heavy cropper, yielding from 50 to 75 bu. per acre, quality excellent. Prices, postpaid, lb. 25c; 3 lbs. 60c.

BUCKBEE'S NEW BLUE RIBBON BEARDED BARLEY—This is a desirable grain for growing in most sections. It is profitably raised for Fall, Winter and Spring grazing, or it may be cut before it heads out, as a hay crop. As Barley stools well out it really makes better Fall, Winter and Spring grazing than either Rye or Wheat. It is so easily grown and succeeds so well throughout the South that it should be much more largely grown than at present. It can be seeded down at the last working of the corn and as it prevents the washing of soils by Winter rains it is highly prized. S5w 1 1/4 to 2 bushels per acre. Prices, postpaid, per lb. 25c; 3 lbs. 60c.

NEW WHITE HULLESS BARLEY—A Barley with a grain like wheat. An excellent feeding sort, especially for hogs. Our seed is Montana grown, fine, bright, hulless and beardless. Weighs over sixty pounds to the measured bushel. It grows very quickly on any kind of soil. It has been sown as late as the middle of June and made a good crop. Prices, postpaid, per lb. 25c; 3 lbs. 60c.

For 10c a liberal sample of this valuable Barley will be sent to those who wish to inspect it before purchasing.

ODERBRUCKER, or WISCONSIN No. 55 BARLEY—A stiff-strawed, heavy-yielding, six-rowed, bearded variety. It is about the same as Manshury in time of maturity, manner of growth and general appearance, but has a plumper kernel and weighs more to the measured bushel. It has protein content of 15 per cent., or nearly double the amount of protein found in many other varieties. This makes it a very valuable feeding Barley, which is an important consideration with the leading farmers and stockmen, who are now appreciating more and more the value of Barley as a food for all kinds of stock, horses as well as cattle. On account of its large percentage of protein, it is also one of the best malting Barleys. Prices, postpaid, per lb. 25c; 3 lbs. 60c.

SOJA, OR SOY BEANS

As a forage and feed crop, Soja Beans are proving very desirable. They make a large growth, stand up well, and can be cut and cured to advantage. They furnish rich feed and are, in fact, a balanced ration in one crop. They do equally well on light or heavy soil, and are a most desirable land-improver. We have never known a crop that cleans land like Soja Beans, as it is impossible for any weeds to grow where a crop of Sojas are. They also resist drought and hot weather to a remarkable extent. Sow at the rate of one to one and one-half bushels per acre. The thicker sowing will prevent the stalks from becoming too coarse, and will enable them to be cut and turned under to better advantage.

EVANS' EARLY SOJA—Originated by Mr. Evans, the noted Soja Bean specialist of Michigan. By long odds the best variety for planting in the Northern, Eastern or Western States. Choicest Stock Seed (Northern grown), postpaid, lb. 30c; 3 lbs. 75c.

EARLY YELLOW SOJA—Well-known variety; very choice Northern grown Seed. Postpaid, lb. 25c; 3 lbs. 60c.

NEW VELVET BEAN

This new and important forage plant from India is creating a great sensation throughout the Middle and Southern States. Its nitrogen-gathering properties are said to surpass those of the cowpea. It is the rankest grower of any of the legumes; two or three seeds panted 4 feet apart in rows 5 feet apart will literally cover the ground 2 to 3 feet thick with a mass of foliage and vines 20 to 25 feet long, no matter how poor the soil. It leaves a mulch on the ground that is very beneficial to the soil. Prices, postpaid, lb. 30c; 3 lbs. 75c.

L. M. Firmin, Branson, Mo., writes: The Seeds I ordered from you have all proven satisfactory. I got a fine stand of Buckbee's Great Liberty Corn and a bumper crop of ears. It has created quite a sensation here and is sure the real thing for the "Ridge Lands" in the Ozarks; everyone asks where I bought my Seed.

BUCKBEE'S ELECTRIC TREE BEAN

The Most Productive and Heaviest Cropping White Field Bean Known and the Best Bean for Baking

Growing nearly two feet high, branching out in all directions, and bearing its pods so high that they seldom touch the ground, enabling it to stand a wet spell without any injury. All who have raised Beans know that when the pods lie in contact with the ground after ripening a very little rain will ruin the crop, turning the pods and Beans black. This is indeed a wonderful cropper, yielding from seventy-five to one hundred bushels per acre; careful cultivation, while hundreds of our customers report yields of from forty to sixty bushels per acre under average cultivation. Plant them two and one-half feet apart, eighteen inches in the row, two or three beans in a hill.

Pkt. 7c; ½ pt. 12c; pt. 22c; qt. 35c.

THIS IS A BIG MONEY MAKING CROP AND CAN BE GROWN SUCCESSFULLY IN ALL LOCATIONS.

The demand exceeds the supply, which causes the present high prices for brooms. You will find ready market for all the good Broom Corn you can grow.

Buckbee's Improved Superior Evergreen

THE STANDARD VARIETY.

This is the most popular variety in the market. The original seed was secured in Tennessee, then bred and climated, thus making the brush of better quality. In growing it, all imperfect stalks are cut out and the brush is raised and cultivated especially for seed. Postpaid, ½ lb. 15c; lb. 25c; 3 lbs. 65c.

California Golden

Carefully selected and improved so that the brush is straight and long. Of finest quality; light green color, turning to light yellow when allowed to get too ripe. Brush straight and long. Postpaid, ½ lb. 15c; lb. 25c; 3 lbs. 65c.

Oklahoma Dwarf

Grows from three to four feet high, with straight, smooth brush, principally used for making whisks and brushes, though can be used very nicely even for the larger brooms. Postpaid, ½ lb. 15c; lb. 25c; 3 lbs. 65c.

Dwarf Japanese

Popular in many sections on account of its extreme earliness. Straw strong and of good color. Postpaid, ½ lb. 15c; lb. 25c; 3 lbs. 70c.

Broom Corn

Is one of the most profitable crops the farmer can grow if given proper attention. If you want full information about how to grow Broom Corn, write to the Department of Agriculture, Washington, D. C., for Farmers' Bulletin on Broom Corn.

Giant Beggar Weed.

Giant Beggar Weed

A Forage Plant that Never Becomes a Pest. Great for Forage and as a Restorer of Land.

It is more valuable for fertilizing than either Peas or Clover and equal to them for feeding. When once established it grows every year without further attention. It will not interfere with other crops, can be kept under by cultivation, can be eradicated in two years of successive pasturing. This is important, because some forage plants become pests when the land is needed for other crops. The plant is a strong feeder, with deep roots, like Alfalfa, bringing from the subsoil the dormant fertilizing elements, and will enrich the land by its decaying foliage without the expense of plowing it under.

Land planted with Beggar Weed has improved 300 per cent. in six years. Hogs, horses, cows and mules eat it greedily; can be pasture land in Summer and Fall. Can be sown in the Corn field. Will thrive on much poorer land than most forage crops. Five pounds of seed for an acre. Drill or sow broadcast in the Spring after frost. Postpaid, oz. 10c; ¼ lb. 20c; ½ lb. 35c; lb. 60c.

H. B. Elliott, Harbor Springs, Mich., writes: "I have grown your 'Hulless Buckwheat' and consider it far superior to any other kind of Buckwheat I have ever seen; have thoroughly tested its quality and find it O. K. I can certainly recommend it as a profitable crop to grow."

SUGAR CANE OR SORGHUM

Buckbee's Northern Grown

(Plant $\frac{1}{4}$ bushel Seed to an Acre.)

The Best Varieties for Making Sorghum Syrup.

Buckbee's New Honey Syrup Cane

The Favorite Syrup Producer.

As a syrup producer it has no equal, being exceedingly juicy and sweet, making from 200 to 400 gallons per acre, highly flavored. It grows 10 to 12 feet high, is very prolific, sometimes producing five to seven stalks from one seed. Matures about the middle of August to October, owing to time of planting, will keep green and stand, if desired, until killed by frost, allowing the farmer to take his own time to harvest for syrup. Also a splendid forage crop for green feeding, making excellent hay if sown in drills very thick, and may be planted any time between April and August. Price, postpaid, lb. 25c; 3 lbs. 70c.

Buckbee's Improved Early Amber

Successfully grown even in our extreme Northern latitudes. Not only is it valuable for fodder and pasture purposes, but it makes a high-grade cane syrup or sorghum. Price, postpaid, lb. 20c; 3 lbs. 50c.

Buckbee's Improved Early Orange

An exceedingly valuable variety. Very large, of strong and vigorous habit. Early and frequently produces 240 gallons or over of beautifully colored and highly flavored syrup per acre. Price, postpaid, lb. 25c; 3 lbs. 60c.

Sugar Cane for Fodder

(Plant $1\frac{1}{2}$ bushels of Seed to an Acre.)

Valuable for Pasture, Soiling, Green Feed in Cut Form, as Well as for Feeding in Dry State Through the Winter Months.

Sugar Cane not only possesses high value in producing syrup, but as an addition to the daily ration for stock it is almost invaluable. City owners of horses have found that Sugar Cane added to the feed of their stock gives splendid conditioning and strengthening returns—more fat, more ability to stand hard work. Farmers who raise stock, even in a limited way, will find Sugar Cane, in the stalk, a wonderful help in fattening and conditioning. It is not desirable as a full ration, but as an addition it beats all the stock foods in existence. It may be fed green to all kinds of Stock with very profitable results. It can also be used to advantage as Summer pasturage, and is especially satisfactory for sheep and hogs—for this purpose it should be sown or drilled thickly. When fed in the dried condition, handle about the same way as fodder corn. When grown for sugar or molasses the "heads" can be cut and stored and fed either dry or soaked, but the grain should be crushed or coarsely ground. Mixed with equal quantities of Oats, Peas or Soja Beans it makes an excellent food and a great substitute for Corn. One of the most common uses of Cane Seed is as a feed for poultry; it is highly prized and is especially recommended for laying hens. Postpaid, lb. 20c; 3 lbs. 50c.

BUCKWHEAT

Is a "catch crop," easily grown between regular succession crops. Also valuable as a weed exterminator and green manure. It will grow the best on light soil, and it will flourish under greater rainfall than other grains. As a second crop Buckwheat cannot be surpassed.

Buckbee's New Hulless

The One Best Buckwheat—Absolutely Hulless.

Very Early and Yields Double that of Any Other.

The newest and best variety of Buckwheat. Our own introduction and perfected on our Famous Rockford Seed Farms. Fully three weeks earlier than any other variety, and at least three times as productive. Those of our customers who have grown it report it the best Buckwheat they have ever planted.

Sow $\frac{1}{2}$ bushel per acre. Being so early it is exceptionally valuable for the extreme North where other varieties will not mature. The seed has no hull like other Buckwheat but is all meat. No waste in grinding. Our supply of seed is limited so advise early orders. Send to Buckbee for Originators Stock Seed. Postpaid, lb. 25c; 3 lbs. 70c.

Buckbee's Giant Japanese

The Famous Standard Variety.

Entirely distinct from all other varieties. Has all the valuable characteristics of the Japanese Buckwheat, and in addition is earlier and will yield at least one-quarter more per acre. On this account it can be grown farther North. It resists drought and blight very well. The seed is rich dark brown in color and larger than Silver Hull. As much as forty bushels to the acre has been harvested of this variety, making it very profitable to raise. Choicest stock seed, postpaid, lb. 20c; 3 lbs. 50c.

Improved Silver Hulled

A Popular Standard Variety.

This valuable variety is a decided improvement on the old black or gray sort. It is early, remains longer in bloom than other sorts. A fine variety for honey bees. The grain is of a beautiful light gray color, and has a thin husk. Millers prefer Silver Hull, there being less waste, and it makes whiter, better and more nutritious flour than other varieties. It is productive and the grain meets with a ready sale, bringing high prices. Under favorable conditions it will yield 40 to 50 bushels per acre. Choicest stock seed, postpaid, lb. 20c; 3 lbs. 50c.

Our Corn Is Northern Grown

We regret to say that a great deal of Nebraska, Iowa and even Missouri Corn is sold each year by seedsmen as Northern Grown Seed. The term "Northern Grown" is somewhat indefinite, and advantage is taken of this to deceive. With us "Northern Grown" means

THAT EVERY BUSHEL OF OUR SEED CORN OFFERED HEREIN IS GROWN ON AND AROUND OUR OWN HOME FARMS.

While in unusually long seasons the earliest varieties of Nebraska and Iowa grown seed will sometimes mature in the Northwestern states, it is as a rule about thirty days later than Illinois Grown Seed. We cannot believe that any intelligent farmer in the Northwest will knowingly plant Southern seed when for a few cents an acre more he can secure true and reliable planting stock that will mature. Those who want early maturing Corn should buy nothing but the true Northern Grown Seed, and absolutely know that they are getting it.

Buckbee's New Early Prosperity

Best 90 Day Early Yellow Dent Corn.

Prolific, hardy and vigorous. Stalks grow to a height of seven or eight feet, and set the ears about three and one-half to four feet from ground—just right height for easy picking. A wonderful peculiarity of this Corn is that it never produces a barren stalk—every one has an ear, and generally two, sometimes three. Surpasses all other yellow varieties—seventy pounds in the ear will make more than sixty pounds of shelled Corn. Prices, postpaid, lb. 25c; 3 lbs. 60c.

BUCKBEE'S NEW EARLY ILLINOIS

The Best 90 Day White Dent Corn.

A fitting companion to Buckbee's New Early Prosperity, the one being all that a White Dent ought to be, the other a Yellow Dent of surpassing merit, yields of 115 bushels per acre being about the average. We claim that there are more good points combined in these two Corns than in any ten other varieties in cultivation. Prices, postpaid, lb. 25c; 3 lbs. 60c.

Buckbee's Great Western Yellow Dent

The type is very even, ears measuring ten to twelve inches in length, often weighing one and one-half pounds or more. Very uniform in size and shape, with sixteen to eighteen rows of deep, pure golden yellow kernels set on small-sized cob, which is well filled out over the tip and butt. The grains are of good size, long, flat, and closely set together, deeply dented, and solidly fill the entire surface of the ear. We call this a one-hundred-day Corn, but it often ripens in ninety-five days. Prices, postpaid, lb. 25c; 3 lbs. 60c.

Buckbee's Great Western White Dent

A most marvelous variety of White Corn which will, in yield and quality, surprise everyone who plants it. The stalks generally bear two good ears each, and frequently three are found. It yields splendid crops even on light soil. All ears are uniform and well filled out, and will easily make sixty pounds of shelled Corn to the bushel. Prices, postpaid, lb. 25c; 3 lbs. 60c.

C. A. Ruble, Seagoville, Texas, writes: "I planted Buckbee's Prosperity seed corn bought from you on March 22nd, and on July 16th I gathered some of it and planted again for another crop. Just think, raised my seed; and planted again from this seed and matured that crop also—that's going some!"

BUCKBEE'S "Full of Life" FIELD CORN

Buckbee's Early Gold Mine

This great variety will usually produce a crop in ninety days or less. It can safely be planted up to the middle of June and still be depended upon to ripen by the middle of September. It produces a magnificent yield, there generally being two good-sized ears to the stalk, with large kernels, cob well filled. Postpaid, 1b. 25c; 3 lb., 60c.

Buckbee's Great Liberty Field Corn

This new variegated Corn combines more solid merit than any Corn in cultivation. Expert Corn Growers pronounce it a perfect Field Corn as to yield, size of the ears, color, size of cobs, length of grain, size of grain, size of fodder, size of growth of fodder, and the extra fine quality of the fodder. Postpaid, 1b. 25c; 3 lb., 60c.

Early White Cap Yellow Dent

A very strong grower with heavy fodder and large ears. Matures in 90 days. The grain has white cap, yellow body. Heavy yielder. Postpaid, 1b., 25c; 3 lb., 60c.

Reid's Yellow Dent

Ears 9 to 10 inches long, very slowly tapering; about 7 inches around; 18 to 24 rows, with narrow space between; kernels light yellow. Matures under favorable conditions in 110 to 115 days. Postpaid, 1b., 25c; 3 lb., 60c.

Thoroughbred Leaming

Deep golden color; striking uniformity. The ears range from 9 to 12 inches long. Kernels broad, thick, deep, rather rough, rounding wedge shaped. Red cob, medium in size. Matures in about 115 days. Postpaid, 1b., 25c; 3 lb., 60c.

Regenerated Red Hackberry

The color is a rich, dark red with occasional light caps; grain deep and hackled; ear somewhat above the average with small cob. It is a safe Corn to plant and produces a good crop in unfavorable seasons, when other Corns will hardly make nubbins. Postpaid, 1b., 25c; 3 lb., 60c.

Minnesota King

A Famous Half-Dent, Eight Rowed Corn

This was introduced a number of years ago and has steadily increased in favor since its introduction, and we consider it one of the most valuable sorts ever grown for the Northern States. Postpaid, 1b., 25c; 3 lb., 60c.

Great Brazilian Flour Corn

One of the Greatest Novelties Ever Introduced

Originated in Brazil, where it constitutes the principal food of the inhabitants. Its strong points are:

It yields at the rate of 100 bushels of green fodder per acre for cattle, of the most delicious, sweet, tender, juicy, nutritious food we have ever seen.

It makes flour in quality equal to wheat. Of course, it is not so white, but oh, what delicious cakes, rolls and biscuits; fully as palatable as from any flour known. Postpaid, 1/2 lb. 15c; 1b. 25c.

Field Corn—Extra Early Flint

Buckbee's Early Northern

The Greatest Yielding Flint Corn The Only Corn for the Extreme North.

Ears ten to fifteen inches long, of rich yellow color. Enormously productive, outyielding any Field Corn that we have ever seen in the far North. Matures exceedingly early, from sixty to seventy days, being a fair average. The kernels are large and the stalks are of good height. The ears average two to a stalk, growing well up so as to readily admit being cut by the harvester. The stalks grow very tall and leafy and make superior fodder. Will surely prove of the greatest value to the farmers of the far North, particularly the Dakotas, Northern Minnesota, Wisconsin, Michigan and the Canadian Provinces. You will be pleased with this earliest and big yielding Flint Corn. Postpaid, 1/2 lb. 15c; 1b. 25c; 3 lbs. 60c.

Improved Indian Squaw Corn

Holds more records for wonderful performances under difficult conditions than any Corn ever grown.

It is an extremely early variety, maturing in 85 days. Perhaps the most wonderful quality of this corn is its power to resist drought. The most protracted dry weather hinders its growth not at all and still it will weather a wet season equally well. It can stand as much dry weather as Kaffir Corn. In appearance this Corn is one of our most handsome varieties. The kernels are of different colors, red, blue, yellow and white, giving the ears a curiously beautiful mottled appearance. The ears grow from eight to twelve inches in length and are of symmetrical form. Postpaid, 1/2 lb. 15c; 1b. 25c.

Longfellow

Has Individuality That Commends.

A yellow Flint variety that is particularly adapted to the North. It is an eight-rowed sort, with ears twelve to fifteen inches in length and about one and one-half inches in diameter. Small cob, large kernel and very broad. Postpaid, 1/2 lb. 15c; 1b. 25c.

North Dakota White Flint

An Early Maturing Variety.

This is a well-established variety, with uniform characteristics, including early maturity and medium size, both of stalks and ear. Choicest stock seed, postpaid, 1/2 lb. 15c; 1b. 25c.

Extra Early King Philip

A Red Flint That Is Unbeatable.

Earliest and best variety of red Flint Corn. Ripens within eighty days from time of planting. Ears large; good yielder. Choicest stock seed, postpaid, 1/2 lb. 15c; 1b. 25c.

BUCKBEE'S GOLIATH FODDER CORN

THE WORLD-BEATING FODDER PRODUCER. SURPASSES ANY OTHER FODDER CORN ON EARTH.

A great variety which we have been developing for years. Thousands and thousands of our customers in every part of the country assert that it stands without a peer for feeding either in the green state or for silo purposes. It is very rich in nutriment and a wonderfully immense yielder. Grows rapidly, is early, short jointed, tall, and produces an overwhelming abundance of leaves and rich, juicy, sugary stalks, with a strong tendency to mature several ears. Postpaid, $\frac{1}{2}$ lb. 15c; 1 lb. 25c; 3 lbs. 60c.

Red Cob Ensilage Corn

One of the Best Fodder Corns.

Beyond doubt the best fodder corn, either to feed green right from the field, to put up for the silo, or to cure and stack away. It is a pure white corn, cropping as high as 45 tons per acre. It is sweet, tender and juicy, and furnishes more nourishment than any other variety; has short joints and therefore an abundance of leaves and grows to a fair height, but not over-large and coarse-stalked as some varieties. Price, postpaid, 1 lb. 25c; 3 lbs. 60c.

White Cob Ensilage Corn

A Popular Standard Variety.

A pure white Corn with a white cob of tall growth, short joints and leafy, giving an abundance of fodder; sweet, tender and juicy, cropping as high as 45 tons per acre. It is a popular standard variety which has a wide reputation all over the country and may be successfully grown for fodder in almost any latitude. Drill $1\frac{1}{4}$ bushels to the acre in rows $3\frac{1}{2}$ feet apart. Price, postpaid, 1 lb. 25c; 3 lbs. 60c.

BUCKBEE'S SUPERIOR EARLY KAFFIR CORN

A Great Drought Resister.

Kaffir corn not only produces a foliage of excellent forage quality but its seed is, as a grain, almost if not quite equal to Indian Corn, practical farmers and scientists affirm, while it is successfully and profitably grown on land high or low, rich or poor, and whether the season is wet or dry. Easily yielding two crops of fodder in a season.

Plants attain a height of from 6 to 10 feet, straight and upright. Stems have a stalky tendency and produce numerous wide leaves. The stalks do not harden as do other fodder crops, but keep green, brittle and juicy. A most excellent fodder, either green or dry, being highly relished by all stock. It should be sown in rows, about 3 feet apart, planting 6 inches in the rows. Use from 10 to 15 lbs. seed per acre. Its wonderful qualities are unaffected, even as far North as Dakota. It is immensely productive and does well everywhere. A notable peculiarity of Kaffir Corn, and one which makes it of unusual importance in regions of limited rainfall, is that its growth may be suspended, perhaps a month, on account of severely dry weather, and then when the rains come it continues its growth almost the same as if there had been no interruption. Very choicest "Full of Life" Seed of strong germination. Postpaid, $\frac{1}{2}$ lb. 12c; 1 lb. 20c; 3 lbs. 50c.

JERUSALEM CORN

A New Forage Plant of Great Merit.

Belongs to the non-saccharine Sorghums, and was brought a few years ago from the arid plains of Palestine. It is pronounced the best and surest grain crop for dry countries and seasons—even better than Kaffir Corn or Milo Malze. It grows several smaller heads on side shoots, often as many as eight heads on a stalk. Very valuable for feeding stock, and proves a gold mine for chicken feed. Plant five to ten pounds per acre. Postpaid, $\frac{1}{2}$ lb. 15c; 1 lb. 25c; 3 lbs. 60c.

D. F. Burkhalter, R. R. 1, Erick, Oklahoma, writes: The Seed Corn bought of you is up and growing finely and so far your Northern Grown "Full of Life" Seeds do the best of all in this section.

JAPANESE
MILLET.

J. M. Decker, Lowell, Ariz., writes: The Japanese Millet purchased from you last year averaged about 4½ feet high and so thick that a mowing machine could hardly go through it.

Milo Maize.

Buckbee's California Beauty MILLET

THE BEST HOG AND STOCK MILLET.

The most remarkable leafy, bushy, vigorous growing, earliest Millet in the world. Yields as high as fifteen tons of hay or more to the acre. It will make a magnificent crop of hay if sown immediately after your oats or barley, rye or wheat is cut, as it will ripen in from sixty to ninety days. It is positively the Millet wonder—very leafy, prolific, and exceptionally fine for hay and feed. This Millet, unlike any other, stands the hot, dry winds of the Dakotas, the burning prairies of Kansas and flourishes on the semi-arid soils of Western Nebraska and Colorado—in fact, it grows where no other Millet grows. Sow one-half bushel per acre. Postpaid, lb. 25c; 3 lbs. 70c.

German or Golden Millet

One of the best varieties. Quick growing and will produce an immense amount of valuable fodder. It makes the best of hay. Sow ½ bushel per acre. Postpaid, lb. 20c; 3 lbs. 50c.

Hungarian Grass OFTEN CALLED HUNGARIAN MILLET.

Valuable hay for stock raisers; yields a good supply. It should be cut when in bloom, and the fibre will not be too woody for feeding stock. Sow ½ bu. per acre. Postpaid, lb. 20c; 3 lbs. 50c.

New Japanese Millet

Grows from four to seven feet tall, but is not harsh and woody as other grasses and is one of the most profitable and valuable seed crops. We have grown this splendid Millet for years, and have been so careful in the selection and improvement of the stock seed that Buckbee's strain is acknowledged to be the best in existence. In some sections of the country it is known as Barnyard Millet, while in other parts of the country it has been erroneously introduced under the name of "Billion Dollar Grass." In spite of these names it is such a good thing that it has come to stay, and will live long in the public favor under its proper name, Japanese Millet. In this latitude we usually sow from May 10th to 20th. Sown at these dates it will make an excellent

soiling crop, giving two cuttings—about mid-July and late August. It yields 50 to 70 bushels seed per acre and three to five tons hay. Prepaid, lb. 20c; 3 lbs. 50c.

Pearl Millet

This quick-growing forage plant has been long known under the name East India or "Cat-tail" Millet. Sown in drills four feet apart and cultivated like corn, the plants attain a height of eight to ten feet with slender long-bladed leaves. These stalks can be cured for Winter use and the seed makes an excellent poultry food. But the best use of the plant is to cut the stalk for green forage when about three feet high, and allow the plants to make a second growth for Fall feeding or ensilage. Ten pounds of seed are required per acre. Postpaid, lb. 25c; 3 lbs. 70c.

The Wonderful Milo Maize

Excellent Fodder Plant for Feeding.

Two crops can be made in one year, and it is a sure crop, as it withstands dry weather. Grows four to six feet high. It is splendid feed crop for all kinds of stock. Suckers out at once when cut and makes a fine second crop of heads and hay. Does not shatter in handling; can be cut with a binder and shocked like Wheat. Requires shallow planting and quick shallow cultivation. Fine crops of it grow on sod by dropping the seed in every fourth or fifth furrow and harrowing the ground well. For grain, plant one bushel to 15 or 20 acres and thin out same distance as Indian Corn. Is enormously productive; has yielded 75 bushels per acre. Diversify your crops and you will make feed in almost any kind of season. Recleaned seed. Postpaid, lb. 20c; 3 lbs. 50c.

Branching Dhoura Corn

Yields from six to sixteen stalks from one seed. Being allied to Sugar Cane, cattle, horses and hogs will eat it ravenously. If cut down it starts again with renewed strength. It yielded at the first cutting at the rate of sixty-eight tons to the acre. Plant five pounds in rows per acre. Postpaid, ½ lb. 15c; lb. 25c; 3 lbs. 70c.

Egyptian Wheat or Shalla

A valuable new grain, entirely different from wheat. Some people say it is the Egyptian Wheat or Corn mentioned in the Bible. It belongs to the Sorghum family and should be planted like cane or milo, either for hay or grain. Broadcast, it makes from four to eight tons to the acre. In drills, it yields seventy-five to eighty-five bushels of grain per acre. The plant grows from 5 to 7 feet tall, and produces more and better fodder than cane. It will stand more wet or dry weather than maize or cane. Plant in drills 3 feet apart, using ten pounds of seed per acre. Postpaid, ½ lb. 15c; lb. 25c; 3 lbs. 70c.

Heaviest Cropping Variety of Pedigreed Black Oats.
Tests made by many progressive farmers convince them that these Black Oats are more reliable croppers than White Oats. They are very early. The grain is short and plump, and of the best quality. Early Black Prolific Oats are practically drought proof and rust proof. The straw is stiff, the heads are long, and the grain yield is heavy. Postpaid, ½ lb. 15c; 1 lb. 25c; 3 lbs. 70c.

SWEDISH SELECT, Regenerated Pedigreed Seed

The straw is coarse, noted for its stiffness and power to withstand lodging. The grains are pure white in color, large, thick and plump, making a very handsome appearance. The heads are large, upright and bushy; they are also nearly all meat, the hull being exceedingly thin, making them especially valuable as a feeding Oat. They are quite early and are not liable to smut and rust. Postpaid, ½ lb. 15c; 1 lb. 25c; 3 lbs. 70c.

IMPROVED WHITE RUSSIAN

This grand new variety can be recommended with confidence. Very prolific, extremely hardy, makes a strong stool, grows with vigor and rapidity. The straw, which is heavy and strong, stands well. Heads compact, grain heavy, large and plump. Choicest Stock Seed. Postpaid, 1 lb. 20c; 3 lbs. 50c.

GOLDEN FLEECE

Rust Proof. Heavy Yields.
The Best Yellow. This is a very fine Yellow Oat. It is a heavy cropper, handsome sample, grains yellow and plump, strong straw, stands up well. The blade is much larger than the ordinary Oat, attesting to its vigor and productive capacity; stools remarkably in strong land, seventeen shoots having been counted from one seed sown. Postpaid, 1 lb. 20c; 3 lbs. 50c.

MICHIGAN WONDER

Has stood the test exceedingly well and has proved to be an excellent variety. It is very productive, having yielded more to the acre than any of the standard varieties. Very early and has thus far proved itself rust-proof. Stands up remarkably well. On account of its thin hull, heavy meat and soft nib, it is a desirable variety. Postpaid, 1 lb. 20c; 3 lbs. 50c.

NEW APPLER WINTER TURF OATS

This is undoubtedly one of the best all round Oats for planting in the Fall as they afford a valuable pasture the greater part of the Winter and early Spring, thus reducing the quantity of other necessary food. They may be harvested early enough in the Spring for other crops to follow. This variety spreads and stools out enormously, especially when grazed, and if stock be taken off by March will yield a large crop of grain. This is a very popular Oat in the South, especially on the light sandy soils of the coast region. Postpaid, 1 lb. 20c; 3 lbs. 50c.

TENNESSEE OR VIRGINIA GRAY WINTER OATS

This splendid variety has proven immensely popular and satisfactory wherever it has been grown. When sown early and the roots thoroughly established in the soil, it is as hardy as Wheat, and will stand as much cold as that crop. Its stooling propensities are remarkable and on good soil, yields from fifty to seventy bushels per acre. The grain is of a dark gray color with a distinct stripe and weighs heavier than the ordinary Oat. It is frequently seeded as late as the middle of November. Postpaid, 1 lb. 20c; 3 lbs. 50c.

TEXAS RED RUST-PROOF WINTER OATS

A standard favorite not only in Texas, from which it derives its name, but all through the Southern States. The Texas grown Oat has a very heavy berry, nearly every one has a distinctive beard. Postpaid, 1 lb. 20c; 3 lbs. 50c.

BUCKBEE'S NORTHERN GROWN COW PEAS

THE GREAT SOIL IMPROVER—Makes Poor Land Rich—Makes Good Land More Productive.

The Cow Pea has proved to be one of the greatest fertilizers of the age. It is richer in fertilizing matter, more lasting, more beneficial, a greater and quicker soil improver and a better soil enricher than the fertilizer drawn from the barnyard. It makes excellent fodder for cattle. The seed, or grain, is ground and used for cattle fodder; the leaves and stalks also make excellent fodder fed green.

BUCKBEE'S EXTRA EARLY MICHIGAN FAVORITE

Here is a Cow Pea that will mature as far North as Canada. In quality and productiveness, it is superior to any of the well known standard varieties; 8 to 12 tons of excellent fodder per acre is not an uncommon yield, and twenty to thirty bushels of seed per acre is often harvested. As a "turn under" or fertilizing crop it has no equal, being exceedingly rich in nitrogen gathering qualities. Price, postpaid, ½ lb. 15c; 1 lb. 25c; 3 lbs. 70c.

PROLIFIC BLACK EYE

This pea is one of the earliest. It is a strong grower and moderate trailer. It will mature seed in about 60 days. A very valuable hay crop can be made from it in the North, especially on sandy soils. In the South it is grown mainly for table use, and takes the place of the white beans in the North. Prices, postpaid, ½ lb. 15c; 1 lb. 25c; 3 lbs. 70c.

IMPROVED WHIP-POOR-WILL

A small seeded pea of a dark reddish color dotted over with dark specks. It is a second early variety, and matures in about 70 days. It is not a heavy forage maker, but a very productive variety and largely grown as a soil improver and for pasturage. Trails very little and usually in bush form only. Prices, postpaid, ½ lb. 12c; 1 lb. 20c; 3 lbs. 50c.

NEW REVENUE

The new Revenue Cow Pea is not only a field variety but a splendid garden pea. The green pods are splendid as snap beans; delicious hulled and used while green as lima beans, and excellent in the dried state, boiled or baked as navy beans, or used in soup. Makes a large growth of vines, 8 to 15 feet long, and covers the entire ground to a depth of 2 or 3 feet with a dense growth of vines. Price, postpaid, ½ lb. 17c; 1 lb. 30c; 3 lbs. 80c.

FIELD PEAS

AN EXCEEDINGLY VALUABLE FORAGE AND FEEDING CROP. For the Northern, Eastern and Western States there is no crop of greater value than Field Peas. They are a profitable crop to grow, in that the Peas when threshed are always marketable, and they stand in the front rank as a fodder plant, also makes an excellent soil improver when turned under.

BUCKBEE'S NEW EARLY SNOWFLAKE

By far the best Field Pea. Immensely productive. Height of vine 3 ½ to 4 feet. Dry pea is of a beautiful pearly white color. Price, postpaid, 1 lb. 25c; 3 lbs. 70c.

FRENCH JUNE

The foliage and habit of growth quite similar to Garden Peas. It is quite hardy and may be sown early in the Spring, and will be ready to cut in May or June. Price, postpaid, 1 lb. 25c; 3 lbs. 70c.

IMPROVED WHITE CANADA FIELD

A well-known and standard variety of Field Peas. Price, postpaid, 1 lb. 20c; 3 lbs. 50c.

Buckbee's New Early Snowflake Field Peas.

BUCKBEE'S GREAT SAND VETCH

THE WONDERFUL SAND OR HAIRY WINTER VETCH (*Vicia Villosa*).

Our Seed is Government Inspected and will show a test for Purity of 98% and Germination better than 90%. AS A PASTURE PLANT FOR LATE FALL AND EARLY SPRING IS WITHOUT AN EQUAL, FURNISHING GREEN FORAGE DURING TWO PERIODS OF SCANTY VEGETATION.

This Vetch is, beyond doubt, one of the most valuable fodder plants for the West and Northwestern States, owing to its adaptability to withstand severe drought, heat and cold. The vines are very similar to pea vines, but are more slender and much more thickly clad with leaves and side stems, which furnish nice, succulent feed. Individual plants will make a ten-foot growth before going to seed. It is an annual, but drops its seeds freely, and will come up year after year on the same ground. The Washington Department of Agriculture estimates the value of an acre of this Vetch plowed under equivalent to putting into the ground \$25 to \$45 worth of commercial fertilizer. One important feature is that a sowing made in August or September covers the ground before Winter sets in and prevents washing of the soil during the Winter and early Spring, thus saving a great portion of soluble mineral fertilizers contained in soil, which otherwise would wash or leech out. Can also be sown in April and will be ready to cut by the middle of July, the second growth affording excellent hog pasture during the Summer.

FOR A HAY CROP IT IS PAR EXCELLENCE.

Make sowings in early Spring at the rate of 30 lbs. per acre broadcast, with the addition of one-half bushel Rye or Oats to furnish support for the vines. This latter method will give the best satisfaction. On good rich soil it yields enormous crops of green fodder, running from 10 to 15 tons to the acre; equal to 3 to 4 tons when cured as dried hay. It is also a remarkable grower on sandy and thin land. Don't fail to try it. Our seed is the very choicest Northern Grown. Postpaid, 1 lb. 25c; 3 lbs. 70c.

SPRING VETCH

This annual variety is extensively used for planting with Oats for Summer and Fall fodder. Grown and used in the same manner as Winter Vetch, though not so hardy, strong and vigorous. Postpaid, 1 lb. 20c; 3 lbs. 55c.

GIANT SPURRY

It flourishes on sandy worn-out soils where no other plant flourishes. It comes next to Clover as a fertilizer. It is of very rapid growth and is sown the latter part of March, April or May, at the rate of 10 lbs. per acre if wanted for hay. The seed is sown broadcast on well prepared soil and covered lightly by harrowing. It germinates quickly, and in from 6 to 8 weeks is ready to cut. It is usually cut for hay the first time, and pastured afterward for the rest of the Summer. If wanted as a fertilizer, 20 lbs. per acre are sown, and when from 15 to 20 inches high, plowed under. Two crops can be plowed under in one year on account of its quick growth. It is readily eaten by cows. Postpaid, oz. 10c; ½ lb. 15c; 1 lb. 25c; 3 lbs. 65c.

BUCKBEE'S
BONANZA
RAPE

RAPE The Best Fodder for Sheep and Cattle

Buckbee's Dwarf Bonanza

Gives a luxuriant pasture and a tremendous yield. If sown in May, it grows rapidly and can be cut or pastured the latter part of July. If sown the first half of July it will come into fine play as a fodder in September, October and up to November. Dwarf Bonanza Rape is easily grown, perfectly hardy and possesses remarkable fattening qualities. One acre will pasture 36 head 2 months, and lambs will make a gain of 8 to 12 pounds a month. Pigs and cattle are also very fond of it. Rape is especially adapted for a catch crop, succeeding when from any cause other crops have failed. When sown broadcast use 5 pounds to the acre; if in drills and cultivated, from 1 to 2 lbs. an acre will be enough. Postpaid, lb. 30c; 3 lbs. 80c.

Dwarf Essex Rape

A standard variety. Not quite so strong and vigorous as Dwarf Bonanza, but never fails to give the best of satisfaction. Fine imported seed; price, postpaid, lb. 20c; 3 lbs. 50c.

MAMMOTH SPRING RYE

This is quite different from the Winter Rye and is highly valued wherever known. It is not only more productive, but the grain is of finer quality and it can be successfully grown in any latitude. Makes an excellent catch crop where winter grain has been killed out, or for sowing where a Fall crop has not been planted. The straw is of special value as it stands six or eight feet high, being better than that of Winter Rye and producing nearly four times as much straw as oats. Produces 30 to 40 bushels of grain to the acre. As it does not stool like Winter Rye, not less than two bushels to the acre should be sown. Prices, postpaid, lb. 20c; 3 lbs. 50c.

GIANT WINTER RYE

This crop is used all over the country for Fall, Winter and Spring pasturage, early green food, and for green manuring, as well as for grain. It is very hardy and will grow on poorer land than any other grain crops. It is a good Spring soiling crop, giving the earliest bite of green stuff and makes a fair quality of hay if cut in bloom or before it is fully headed out. Used for a grain crop its straw makes the best bedding for cattle and horses and if carefully threshed sells at high prices for collar making and other manufacturing purposes. It is also an excellent green manuring crop for turning under in the early Spring. Sow at the rate of 1½ bushels per acre. Prices, postpaid, per lb. 20c; 3 lbs. 50c.

SPRING SPELTS OR EMMER

Makes a Good Crop with Almost Any Condition of Soil and Climate. Outyields any other grain and makes better feed than Barley or Oats.

It is neither wheat, rye nor barley, and yet it appears to be a combination of the three. It is more like wheat than any of the others mentioned. For fattening cattle, poultry, horses, sheep, pigs, etc., it is claimed to be ahead of other grains; in fact, all kinds of animals seem to thrive on it. Yields 80 to 100 bushels of richer food than corn, besides giving as much as 4 tons of good hay per acre. Excellent for pasture and can be fed in the green state. Will grow well and produces enormous crops on land where wheat will not grow. Those who have not grown Spelts should not let another season go by without giving it a place and an important place, too, on their farms. Sow 2 bu. per acre. Our own growth, choicest Northern grown pedigree stock seed, postpaid, pkt. 5c; lb. 20c; 3 lbs. 50c.

WINTER SPELTS OR EMMER

Produces more Nutriment than any other Crop.

A new variety first introduced from France by the Department of Agriculture several years ago; and has been tested on many of the experimental farms with good results: yielding from 40 to 77 bushels per acre. As a feed crop it is equal to or superior to, the Spring or Summer Spelts. It does well on all kinds of soils and lands—bottom, second bottom, table and hill—with apparently no preference. It gives uniform good success everywhere, and changes no more than other crops. It produces more nutriment than any other crop—more than corn in the corn belt, and can be grown more cheaply. In a number of the Central, Southern and Eastern states, where Oats do not do so well as in the North, and where winter Oats would not be hardy, there is a large demand for a Winter Cereal to be used as stock feed. It will ripen earlier than oats, yield better, and furnish a considerable quantity of Fall and Winter pasturage when the ground is in condition for turning Stock into the field with safety.

Winter Emmer will fill that demand exactly and satisfactorily. The preparation of the land, seeding and subsequent management of the Winter Emmer crop are practically the same as that required for Rye and Winter Wheat. Our own Growth Choicest Northern Grown "Full of Life" Seed. Price, postpaid, pkt. 10c; lb. 25c; 3 lbs. 70c.

AUSTRALIAN SALT BUSH

A Forage Plant for Alkali Soils and Regions Subject to Periodic Droughts.

This is a most wonderful forage plant, as it will grow freely in arid and alkali lands that will produce no other vegetation, yielding a marvelously liberal foliage which is eagerly eaten by all kinds of stock. It is of creeping habit. From twenty to thirty tons of green fodder have been harvested from one acre. It has further been proven that after three or four crops have been grown on alkali land the soil is then capable of producing any other vegetation. In many sections of the States this is in itself of priceless value. This plant has been very extensively tried where single plants grown on the poorest alkali ground have reached a diameter of sixteen feet in one season. One pound of seed will seed an acre. It grows readily from seed, and requires no cultivation.

Price, postpaid, pkt. 5c; oz. 15c; ¼ lb. 35c;

½ lb. 60c; lb. \$1.00.

SUNFLOWER

MAMMOTH RUSSIAN

The best egg producing food known for poultry. Can be raised cheaper than corn. Single heads measure fifteen to twenty-two inches in diameter, and contain an immense amount of seed, which is highly valued by all farmers and poultry breeders who have tried it.

If you keep only a pair of fowls get a pound of this seed just for a trial and be convinced.

It contains the shell to make eggs.

It gives the fowls a bright lustrous plumage.

It keeps them in a strong, healthy condition.

It prevents roup.

It is a heavy cropper on almost any soil.

SUNFLOWER

It can be sown from early spring up to July.
It is used as a medical herb.
It is fattening to either poultry or cattle.
Its strong, thick stalk can be used as fuel.
In fact, it is the most wonderful, cheapest and best poultry food known.

Three pounds will sow one acre and the average yield is 100 bushels to the acre. Postpaid, oz. 5c; ½ lb. 15c; 1 lb. 25c; 3 lb. 70c.

Teosinte

The World Beating Fodder Plant.

Here is a truly wonderful forage plant worthy of general cultivation. It comes to us from the rich, fertile plains of the Nile; where, travelers tell us, the enormous yield of 300 tons green fodder per acre is not uncommon. This is what it does in Egypt. What does it do in America? Almost equally as well. Give it a rich, warm, balmy soil, and it will yield from 100 to 150 tons of green fodder per acre. It is simply marvelous. Down in Georgia, in Florida and North Carolina, its yield is all the way from 100 to 200 tons of green fodder per acre. It grows to a height of 18 feet in those states, while a single kernel will produce from 60 to 100 stalks of the most nourishing green fodder imaginable. Our test in the North gives it an average yield of about 50 tons of green fodder per acre. On our Rockford Seed Farms, where the soil is sandy and warm, it yielded at the rate of fully 60 tons per acre, sending forth from 20 to 60 shoots from one kernel of seed. It was the most magnificent thing we have ever seen. About 3 pounds of seed are required per acre. PRICE OF SEED, postpaid, oz. 15c; ¼ lb. 40c; 1 lb. \$1.25.

Buckbee's "Full of Life" Flax Seed

No. 25 or Primost Flax

This is a pure bred flax. It is selected from a variety which came to the Minnesota Experiment Station from the U. S. Department of Agriculture.

In 1896 numerous individual plants were selected from a bed of this Flax, some with heavy bushy tops to be used in breeding for a larger yield of seed, others with tall, slender stems for fibre. Each of these selected mother plants was grown in the nursery for several years, and the best of these plants selected for seed is the Minnesota No. 25, and named Primost. Our supply of this seed is limited. Send your orders early. Price, postpaid, per lb. 20c; 3 lbs. 50c.

Field Lupines

A Good Fodder Plant.

One of the best plants known for reclaiming poor soil, particularly sandy and old, worn out land, by plowing under a crop of Lupines such land can be made very valuable. It is so highly valued in Germany that it is called the "Gold of the Desert" or "Desert Reclaimer." It makes good fodder in either the green state or as hay. The seeds are very fattening when used with hay. Sow in the early Spring at the rate of 60 to 90 lbs. per acre. Postpaid, ¼ lb. 15c; 1 lb. 30c.

Thousand-Headed Kale

A Splendid Pasture Plant.

Claimed to yield a much heavier crop than Dwarf Essex Rape and on account of the enormous amount and superior quality of feed it affords, it is rapidly succeeding Dwarf Essex Rape in some sections and among many shrewd farmers. Thousand-Headed Kale is a variety of cabbage. The plant attains a height of three to four feet. The stem is covered with leaves, which form small heads. Animals, especially sheep, eat it greedily. It grows well on most any land and is hardy. The seeds may be either drilled or broadcasted. Plant in rows 26 to 30 inches apart, if drilled; thin to 16 to 18 inches. Broadcasting requires 1½ lbs. seed per acre. Postpaid, ¼ lb. 20c; 1 lb. 50c.

Marquis Spring WHEAT

The Earliest and Hardest Spring
Wheat Grown

BEARDLESS—GRAIN HARD
PLUMP, DARK RED
STRAW-LONG, VERY STIFF
WONDERFUL YIELDER

In introducing "Marquis" Wheat we are offering our customers absolutely the earliest and hardest Spring Wheat grown. It is from one week to ten days earlier than Red Fife. It grades No. 1 hard for milling purposes, and outyields the Red Fife. In appearance "Marquis" Wheat is similar to Red Fife, but the heads, as a rule, are heavier and the stalk is shorter making it less liable to lodge. The kernel is flinty, a little darker than the Red Fife and more plump than that variety. Price, postpaid, lb. 25c; 3 lbs. 60c.

Minnesota No. 169 Blue Stem Spring Wheat

This variety has no beards and is especially adapted to the older wheat sections of the Northwest. The kernel is of the hard variety, similar to the Red Fife; very productive; one of the best Spring Wheats for milling. Price, postpaid, lb. 25c; 3 lbs. 60c.

Red Fife Spring Wheat

Noted for its earliness, vigor and freedom from smut and all diseases. Beardless. The kernels are hard and flinty, whereby it is recognized as an A No. 1 milling Wheat, adapted to all states where Wheat can be grown. Price, postpaid, lb. 25c; 3 lbs. 60c.

Macaroni or Durum Spring Wheat

It is not only true that Macaroni Wheat can be grown in dry districts, but it must be grown there in order to produce the best quality of grain. Seeded April 26, it was ripe, cut, threshed and in the granary August 6. The shorter period required for a Wheat to grow the more valuable it will be to a locality subject to summer droughts and hot winds. This Bearded Wheat gives the best results on new land. It does not shell or bleach and is also hail proof, owing to the tightness of the hull. The straw is very strong. Price, postpaid, lb. 25c; 3 lbs. 60c.

New Red Wave Winter Wheat

Beardless—Ripens Mid-Season.

It is a cross between Early Red Clawson and an unnamed cross bred from Russian parentage. It is a bald brown chaff, dark, medium long, large grain; strong, thick-walled, golden straw; medium tall and stocky; heads very long and broad, filled with medium long, large, hard, dark kernels, rich in gluten. Prices, postpaid, lb. 25c; 3 lbs. 60c.

Red Wonder Winter Wheat

Far superior to the improved Turkish Red Wheat. A most valuable bearded variety and is adapted to a great many soils. It can be depended upon for an abundant yield even in unfavorable seasons. It grows a little above medium height; straw jointed and stocky. The straw is very strong at base of head which accounts in a great measure for its ability to withstand storms without lodging. Price, postpaid, lb. 25c; 3 lbs. 60c.

Dakota Reliable Winter Wheat

Dakota Reliable is one of the earliest. Heads are large, compact and well filled with large size red grains. It is beardless, with red chaff and holds grain firmly, preventing scattering. Fultzo-Mediterranean Winter Wheat

This is a beautiful variety in growth, straw, head and grain. If sown thinly or damaged in winter it will stool out and produce 20 or more stalks from one grain. Chaff white, heads smooth or beardless; grains large, color red. Price, postpaid, lb. 25c; 3 lbs. 60c.

BUCKBEE'S "FULL OF LIFE" CLOVER

NORTHERN GROWN, RE-CLEANED GOVERNMENT INSPECTED SEED

NOTHING IS MORE IMPORTANT

To the farmer than that the clover and grass seed he sows should be **pure and clean**. The seed should also be plump, heavy, and well ripened. First-class thoroughly cleaned seed, while a shade higher in price, is really **much cheaper** in the end than the light, chaffy grades so generally sold at much lower prices, even should the latter be free of weeds. Heavy, plump seeds germinate better, will produce a much greater number of strong plants, go farther and give a better stand.

IT IS WITHOUT QUESTION

To the **advantage** of the purchaser, both in a **money point** of view and a **good stand**, to buy the **best seed obtainable**.

ALFALFA

The Queen of All the Clovers

THERE IS NO STATE IN THE UNION WHERE IT CANNOT BE SUCCESSFULLY GROWN.

Alfalfa ranks higher than Timothy hay in feeding value. Experiment Stations place the feeding value of Alfalfa hay at twenty dollars per ton as against Timothy hay at twelve dollars per ton. Cut and cured for hay it is the greatest money-maker known, averaging over forty dollars per acre clear profit.

Comparative Value—The Wisconsin Experiment Station says that one acre of Alfalfa yields as much protein (the milk and meat producer) as three acres of common clover or nine of Timothy or twelve of Brome grass.

As a Meat Producer—Feeders in the West claim to be able to put fat cattle on the market 20 to 30 per cent. cheaper with Alfalfa as balance of feed than on corn alone.

The Dairyman's Stand-by—The Kansas Agricultural Station reports a case where a dairyman maintained ten milch cows for a whole summer without any grain, on two acres of Alfalfa, cut and fed to them fresh three times a day.

Our seed is of the Highest grade, Northern-grown on new Land and is of strong and vigorous Germination, and will conform to any Pure Seed Law both as to Purity and Germination.

Grimm or Everlasting Alfalfa

The hardest—the most lasting and most productive, having survived Winters that killed out many fields of other varieties of Alfalfa. Not only does it endure extreme cold and drought, but excellent crops of it have been raised on strongly alkaline soils. Spring is the best time to sow the seed, though very satisfactory results are obtained by planting in the early Fall months of the year and is usually sown broadcast at the rate of 15 to 20 pounds to the acre. It produces from 3 to 7 tons of hay to the acre. It will grow 3 to 5 crops a year and lasts from 5 to 50 years with one sowing. It has as much protein as wheat bran. As a feed for all kinds of live stock it is unexcelled. **Prices, postpaid, pkt. 10c; 1 lb. 40c; 3 lbs. \$1.15.**

DRY LAND ALFALFA

The extension of Alfalfa growing into the regions of limited rainfall has created a demand for Alfalfa seed especially adapted to those conditions. Seed which has been produced from Alfalfa grown on dry land and without irrigation is of course much preferable for dry land culture to seed produced under irrigation or normal rain-fall. It is not always possible to obtain seed grown under these conditions, but we have succeeded in purchasing a limited amount of fine seed which is offered only until our stock is exhausted. In case we do not have Dry Land Alfalfa when your order is received, we suggest that you state on your order as to what variety we may substitute in its place to the value of the money you send us; or, in the absence of these instructions, we will promptly refund your money if we do not have what is wanted. We never substitute without the consent of the purchaser. "Full of Life Grade." **Price, postpaid, lb. 35c; 3 lbs. \$1.00.**

MONTANA ALFALFA

Montana is producing a very fine grade of Alfalfa. The seed is usually exceptionally large and of high germination. Montana grown Alfalfa is exceptionally hardy and we prefer it to seed from any other place. Our seed is obtained in those sections where plants have endured the extreme cold of Winter and thrive at high altitudes. Our experience of several seasons has demonstrated the superiority of this seed under adverse climatic conditions throughout the entire Northwest. We have been able to secure several cars of exceedingly bright seed from which orders will be filled until the stock is exhausted. We offer here our "Full of Life" Grade only. **Price, postpaid, lb. 35c; 3 lb. \$1.00.**

We Test The Germination of All Seed

We not only use great care in securing good seed, but make critical germination and purity tests before any seeds are sent out. By this method we know exactly as to the vitality of the seed we supply, and make sure it is of strong growth, and clean, plump, heavy and well-tipped, so as to insure a good stand, and free from noxious and foreign seeds; in fact, we aim to have **every bushel of Buckbee's Famous "Full of Life" Clover Seed that we send out test 98 per cent. or better for purity, and 95 per cent. or better for germination.**

When to Plant—Spring is the best time to sow the seed though very satisfactory results are obtained by planting in the early Fall months and is usually sown broadcast at the rate of 15 to 20 pounds to the acre.

TURKESTAN ALFALFA

The climate of Turkestan is not unlike that of our interior states being far removed from the ocean and surrounded by wide expanses of dry land. BUCKBEE'S "Full of Life" CLOVER

NORTHERN GROWN, RE-CLEANED, GOVERNMENT INSPECTED SEED

Alsike or Swedish Clover

This is one of the hardiest varieties known. It is a perennial and does not winter kill. It will do better on moist land than any other variety of Clover, and is suitable for either hay or pasture. When sown with other grasses it forms a thick undergrowth and greatly increases the yield. It is frequently sown with both Medium Red Clover and Timothy and the quality of hay thus produced is excellent. It is finer and more leafy than Red Clover, although it does not grow so high. Extra fine for Honey Bees, and cattle prefer it to all other Clovers. Also valuable for soiling. Clover sick land producing fine crops of Alsike. Sow broadcast either in Fall or Spring on freshly harrowed ground or among other grain, 8 to 10 lbs. per acre. Postpaid, lb. 30c; 3 lbs. 85c.

Medium Red or June Clover

This is the most important of all Clovers and the standard everywhere for hay and pasture. It is known as Common Red or June Clover in many sections. Our Northern-grown Clover Seed has become widely known for its purity, strong vitality, hardiness, vigorous and healthy growth and stooling qualities, so that now we receive many orders from the most distant parts of the United States. It has been tested by the Agricultural Experiment Stations in various parts of the country and ranks among the highest everywhere. Well posted farmers are beginning to appreciate the difference be-

BUCKBEE'S
RELIABLE CLOVER

Medium Red.

Crimson Clover (Giant Incarnate)

This fine Clover is one of the most valuable Fall crops the farmer can put in as it will make the earliest green feed of any of the Clovers. It will yield under favorable conditions 8 to 10 tons of green feed per acre or 1½ to 2½ tons of hay and is worth as a fertilizing crop \$20.00 to \$25.00 per acre. It can be cut or turned under in time for other early Spring crops and in warm climates four or five cuttings are made during the season. Postpaid, lb. 30c; 3 lbs. 85c.

White Clover (For Lawns)

This is a valuable pasture and lawn grass, thrives best on moist, rich ground; does not succeed well on thin soil. Makes excellent forage for Bees. In conjunction with Kentucky Blue Grass it forms a desirable permanent pasture for sheep and cows. Postpaid, lb. 45c; 3 lbs. \$1.25.

Sanifoin or Esparsette Clover

An excellent perennial Fodder Plant, growing about 3 feet high, flowering in June and July. It is adapted for light, chalky soils. Sow 20 to 30 lbs. per acre. Postpaid, lb. 25c; 3 lbs. 70c.

Serradella Clover

The greatest honey producing plant in the world. For light, poor or sandy soils Serradella is one of the best fodder plants. It is sown at the rate of 10 to 15 lbs. per acre and can be sown either with Winter Wheat or by itself or in Rye in early spring, growing rapidly after the grain has been cut. Postpaid, lb. 25c; 3 lbs. 70c.

Sand Clover

Here is an especially rich, hardy herbaceous Clover, that will grow and thrive on the poorest soils and in sand where no other Clover will grow, eaten with avidity by sheep, cattle and horses; useful in mixture for dry soils. Sow 20 lbs. to the acre. Postpaid, lb. 40c; 3 lbs. \$1.15.

Yellow Trefoil Clover

Allied to common Red Clover. Valuable for dry, sandy or poor soil. Sow 12 to 14 lbs. per acre. Postpaid, lb. 30c; 3 lbs. 80c.

Sand Lucerne Clover

Especially adapted to sandy soils. Largely used in Europe. Sow 12 to 14 lbs. per acre. Postpaid, lb. 40c; 3 lbs. \$1.10.

Burr or Japan Clover

This not a true clover, but in appearance and habit of growth is much like White Clover. It is especially valuable in the warmer states where it will flourish on poor and exhausted soils that are too poor to produce profitable crops of any other forage plant. It is an annual but once sown reseeds itself from year to year and in that way will last indefinitely. Usually planted from July to October. Postpaid, lb. 35c; 3 lbs. \$1.00.

tween it and ordinary grades. It pays to have the best. Buckbee's "Full of Life" Grade—the plumpest, cleanest, purest, fanciest grade; tested and of high vitality. Farmers usually sow 15 to 20 lbs. of Clover seed to the acre when sown alone but this seed is so choice that 6 or 7 lbs. is really sufficient if conditions are favorable, but we recommend sowing 10 lbs. so as to be sure of a perfect stand. About 5 lbs. if sown with Timothy. Price, postpaid, lb. 30c; 3 lbs. 85c.

Bokhara, Sweet or Bee Clover (Melilotus Alba)

This plant is grown mostly for fertilizing purposes, although in many sections of the country it is very valuable for feed. It is a valuable preparation for Alfalfa because the same bacteria that work in the Alfalfa Roots have their nodules in the Sweet Clover also. It may be sown at any time of the year, but preferably from April 1st to September 15th. Especially adapted for Bee pasture and all Bee keepers should not fail to try it. Will grow anywhere, even if the land is as solid as a rock. Postpaid, lb. 35c; 3 lbs. \$1.00.

Mammoth Red or Sapling Clover

This is grown largely for pastures and to restore fertility to depleted soils. Being a rank grower, it is very valuable for fertilizing purposes. Sow 15 lbs. per acre. Price, postpaid, lb. 30c; 3 lbs. 85c.

BUCKBEE'S "FULL OF LIFE" GRASS SEEDS

HIGH GRADE—PEDIGREED

The best obtainable, both as respects purity and high germination—pure and clean, plump, heavy and well ripened, so as to insure a good stand, and free from noxious and foreign seed.

Buckbee's "Full of Life" Timothy.

Timothy

As a crop for hay, Timothy is probably unsurpassed by any other grass. It is greatly relished by all kinds of stock, especially horses. It yields more nutritive matter than any other grass or forage plant. It is well suited for a permanent pasture as it will hold its own for several years, before running out. Well adapted to early Spring grazing, as it starts up quickly in the Spring and in favorable Fall weather can be pastured in the Autumn as well. Our "Full of Life" Brand will stand the test of any Pure Seed Law in the World. Will range better than 98% Purity and 95% Germination. Our prices, postpaid, lb. 20c; 3 lbs. 50c.

Bromus Inermis Acknowledged King of the Deserts and Dry Sandy Soils. Makes Lots of Early Spring and Late Fall Feed, Besides Good Crop of Hay.

This highly useful grass grows to a height of three feet and sometimes five feet. A native of Hungary, it has done remarkably well in America, especially in dry, arid soils. A hardy perennial, it is well adapted to cold climates and exposed situations. Produces satisfactory crops on land too poor for Timothy and other grasses. Tried widely, it has been endorsed everywhere, and is pronounced a great boon to farmers because **IT PAYS ON ANY GROUND.**

It does well sown with clover or with clover and timothy. Use twenty pounds to the acre, if alone; if with alfalfa fifteen pounds—they will grow well together. It may be sown in the Fall with Winter Wheat, or in the Spring. Cut when first coming into bloom. A standard bushel weighs 14 pounds.

Choicest Northern grown stock seed, that will stand the test of any Pure Seed Law in the world, postpaid, 1/2 lb. 17c; lb. 30c; 3 lbs. 85c.

GRASS AND CLOVER SEED MIXTURES

SOW ONE TO TWO BUSHELS PER ACRE.

All authorities agree that for PASTURE and HAY best results are obtained from the use of grass seed IN MIXTURE. The reasons are obvious: First—A NUMBER OF SPECIES will insure a much DENSER GROWTH than the same number of seeds of one or two species, and prove less exhausting to the soil, since they live to a great extent on different constituents. Second—Seasons that affect some grasses adversely are FAVORABLE to other sorts. So that with mixtures failure is PRACTICALLY IMPOSSIBLE, provided, of course, the seed is good. We take great pains in selecting grass seeds, in order to secure the HIGHEST GERMINATION, and our mixtures are based on a full appreciation of the requirements of different pastures for which they are intended. Buckbee's Famous "Full of Life" Lawn Grass Seed

HARDY, LUXURIANT, ALWAYS GROWS, ALWAYS THRIVES

Our Lawn Grass Seed

Produces a perfect and enduring lawn of luxuriant richness, with closely interwoven, firm, deep and elastic turf, and it is generally ready for mowing in six weeks from time of sowing and is composed of a thoroughly balanced combination of native and foreign fine-leaved, deep-rooting grasses of interweaving habit, that flourish under varied conditions, soils and climates, growing during different seasons of the year, so that a deep green, smooth and velvety sward free from clumps is maintained from snow to snow without burning brown in the hot months of summer.

A Lawn may be established either by "sodding" or "seeding." The latter is not only much less expensive but much more satisfactory, as better grasses can thus be obtained, and the quality and variety of the grasses have a great deal to do with the appearance and the permanency of the Lawn.

BUCKBEE'S WORLD'S FAIR LAWN GRASS

The Very Best Lawn Seed Ever Offered.

This famous Prize-Winning Lawn Grass is made up of a most evenly balanced combination of native and foreign fine-leaved, deep-rooting grasses that interweave and flourish in different soils and climates, each showing its best strength at seasons different from the others, and thus keeping the Lawn vigorous and green from winter's end to winter's next advent.

Was awarded the great Columbian Prize at the World's Fair. This mixture was used by the World's Fair authorities to produce the beautiful Lawns, which were without question one of the greatest features of the Fair. It is the Ideal Mixture, and is unrivaled for purity and luxuriance in growth and will give complete satisfaction wherever sown. With ordinary care, anyone can, by using this mixture, secure a beautiful Lawn. Complete and explicit directions on "How to Make a Lawn" accompany every package of this seed. The quantity table on this page shows the amount of seed to plant in a given area. Price, postpaid, $\frac{1}{2}$ lb. 17c; 1 lb. 30c; 3 lbs. 87c. Large quantities, by express or freight, not prepaid, 5 lbs. \$1.00; 10 lbs. \$1.90; 15 lbs. \$2.80; 25 lbs. \$4.50.

How to Make a Lawn

Special Quotations

We shall be pleased to quote special prices to Golf Clubs, Institutions, Parks and others who require Lawn Grass and Clover Seeds in large quantities.

SHADY PLACE LAWN GRASS

The Very Best Obtainable—Carefully Blended.

On nearly all lawns there are unsightly bare spots under the shade of trees, which have baffled all efforts to get into grass, but with this mixture there need be no further difficulty. It is a combination of fine dwarf-growing, evergreen varieties which in their wild or natural state are to be found growing in the woods or other sheltered and shaded spots. Ground that has been densely shaded by trees is frequently "sour" and if the drainage is defective it is apt to be covered with moss and coarse bog grasses. In such cases an application of slaked lime, at the rate of one bushel to each thousand square feet, or forty bushels to the acre, is an excellent corrective and sweetener, but the moss should be first removed.

Sow from 50 to 60 pounds per acre for a new lawn or bowling green; 15 to 20 pounds per acre will be sufficient to improve existing turf. Price postpaid, 1 lb. 35c; 3 lbs. \$1.00. By express or freight, not prepaid, 5 lbs. \$1.25; 10 lbs. \$2.45; 15 lbs. \$3.60; 25 lbs. \$5.75.

VELVET GREEN LAWN GRASS

A Splendid Standard Mixture.

This special mixture does not include so great a number of expensive grasses as our "Famous Mixture," but full provision is made for a succession of growth and a careful blending in proper proportion and thoroughly mixed for quickly producing a permanent, thick and velvety sward of uniform growth and rich green grass free from coarseness. Price, postpaid, $\frac{1}{2}$ lb. 15c; 1 lb. 25c; 3 lbs. 70c. By express or freight, not prepaid, 5 lbs. \$1.85; 10 lbs. \$3.65; 15 lbs. \$5.40; 25 lbs. \$8.55.

Quantity of Lawn Grass Seed to Use

1 lb. for 350 square ft.	25 lbs. for one-fourth acre.
5 lbs. for 1750 square ft.	50 lbs. for one-half acre.
10 lbs. for 3500 square ft.	100 lbs. for one acre.
15 lbs. for 5250 square ft.	

BUCKBEE'S EXTRA SPECIAL LAWN FERTILIZER

Makes the Lawn Strong and Keeps it Healthy.

The lack of a good fertilizer is the reason there are so many poor, rusty-looking, unsightly lawns. Use this Lawn Fertilizer if you would have a beautiful and sturdy growth of grass. This fertilizer, used in connection with any of our special Lawn Grass Seed Mixtures, will enable you to produce a perfect lawn. Price, postpaid, 1 lb. 20c. Buckbee's Extra Early Rockford Potato.

BUCKBEE'S "FULL OF LIFE" POTATOES

Pedigreed Stock Grown in the Famous Red River Valley of the North Expressly for Seed

No seed Potatoes can be compared with those produced in the North, either for vigor and freedom from disease, or for producing and long-keeping qualities.

DATE OF SHIPMENT—Potatoes will be shipped at any date ordered at purchaser's risk, but where no special instructions are given to the contrary, we will hold same until in our judgment there will be a minimum danger from freezing. Of the many varieties that claim public favor, we have selected the best in cultivation.

Buckbee's Extra Early Rockford

TRULY A WONDERFUL POTATO.

Handsome, Blight-Proof Variety. Very Heavy Yielder, Cooking Quality the Best.

A new Extra Early Variety of great promise. Makes an extremely quick growth and considering its Extra Earliness is a wonderfully heavy yielder. Is of very handsome appearance with pinkish tinged skin and white flesh. Prices, postpaid, 1 lb. 30c; 3 lbs. 70c.

Buckbee's Noroton Beauty

The Quick Lunch Potato.

The Noroton Beauty is one of the earliest Potatoes ever grown, being about two weeks earlier than the Early Rose. Large table size tubers have been grown in sixty days. It is fully as productive as any main crop or late sort; no other EXTRA EARLY variety yields nearly so heavily. It is handsome in appearance, having a russety white ground, splashed with pink, and pinkish eyes, and more uniform in size and shape than any other variety. The tubers mature simultaneously, a fact which, combined with its extreme earliness, practically does away with danger from blight, or disease, or bugs. Its table quality is superb; flesh is white, dry, and the flavor unsurpassed. Prices, postpaid, 1 lb. 30c; 3 lbs. 70c.

Early Six Weeks

Fine Potato for Southern Truckers.

This is a fine new Potato of the Ohio type and seems to be in demand everywhere. It has been sold under the Six Weeks, Early Market, Extra Early Six Weeks, etc. Several seedsmen claim to have introduced it and more than one has represented it as ready for market six weeks after planting. We never had any such success with it, however. It is Extra Early all right and Market Gardeners and all others who grow Potatoes should give this variety a trial. As now improved, we consider it one of the best extra early market varieties grown. As a table Potato they are not excelled; even for late Spring they keep sound and solid. Prices, postpaid, 1 lb. 25c; 3 lbs. 60c.

Bliss' Red Triumph

A Most Popular Variety.

There is good reason why the TRIUMPH should be popular. It is from seven to ten days earlier than the Ohio, and that oftentimes means a difference of many dollars in the crop. The Potato is of good size, squared at ends. Skin is red, flesh is very white and firm. It is productive, and for several years to come will probably command a higher price among Potato buyers than any other sort. Our stock is genuine. Prices, postpaid, 1 lb. 25c; 3 lbs. 60c.

New Early White Ohio

An Ohio with a White Skin.

It is a true Ohio of the best type in all except color, which instead of being pink, as in the parent, is a beautiful creamy white with pink eyes. Prices, postpaid, 1 lb., 25c; 3 lbs. 70c.

Pure Early Rose

The good old favorite, which continues in great popularity. A prolific yielder, sure cropper and popular market Potato. Every farmer and gardener knows the good Early Rose and nothing more need to be said in its favor. The seed we offer is the purest and best that can be put on the market. Choicest Pedigreed Stock Seed. Prices, postpaid, 1 lb. 25c; 3 lbs. 60c.

Irish Cobbler

It is a most excellent extra early variety, maturing good sized tubers seven weeks from time of planting. It has also the remarkable characteristic of producing very few, if any, small Potatoes, all the tubers being of marketable size. The vines make short, upright growth, so that the hills may be only a short distance apart. The flesh is pure white, with a clean, smooth skin; and in quality they are excellent, always cooking dry and mealy. They are splendid keepers, and taking it all in all, it is a first-class sort and worth the attention of all Potato growers. Specially suited to dry climates on account of its deep roots. Choicest Pedigreed Stock Seed. Prices, postpaid, 1 lb. 25c; 3 lbs. 60c.

Sir Walter Raleigh

A Grand Late Potato.

A white-skin, main crop Potato much resembling Rural New Yorker No. 2, of which it is a seedling. It is decidedly better than its parents; the tubers being quite uniform in size, with but few small ones among them. It is from four to six days later than the parent stock. The color is the same, the skin and flesh being white. In fact, it can be justly claimed for Sir Walter Raleigh that it is the whitest fleshed and finest grained Potato on the whole list of main crop varieties. Prices, postpaid, 1 lb. 25c; 3 lbs. 60c.

Rural New Yorker No. 2

(Also Known as Dusty Rural.)

The Standard White Market Potato.

One of the largest yielding varieties in existence. Large and unusually smooth, with few and shallow eyes, skin white, as is also the flesh, which is of superior quality. Medium late and best drought resister. There is no other Potato of more handsome appearance than the Rural New Yorker. Although it is a large yielder it grows but few and small vines. Prices, postpaid, 1 lb. 25c; 3 lbs. 60c.

Burbank

A Standard Late Variety.

Continues in good demand and is more largely used than any other. It is of good size, of fine form and an excellent yielder. The flesh is white, very mealy and of fine flavor and quality. The best potato for baking. This variety is well adapted for heavy soils. Prices, postpaid, 1 lb. 25c; 3 lbs. 60c.

For Prices in Bulk by Express or Freight, see Order Sheet

BUCKBEE'S
"Full of Life"

POTATOES

Carman No. 3

The Best Main Crop Potato.

The Carman No. 3 is already rivaling in popularity the Burbank, and is undoubtedly a much better Potato. Without any exception, whatever, it is the greatest yielding Potato ever introduced. The tubers are borne very close to the plant, a single turn of the fork turning out every Potato. It is of a large size and of the shapeliest form. Eyes are few and shallow. It is a perfect keeper, and is not surpassed as a table variety. Skin and flesh of extreme whiteness. It has no hollow heart or any dark parts. We recommend this potato to our customers as being unqualifiedly the best of all late sorts. **Prices, postpaid, 1 lb. 25c; 3 lbs. 60c.**

Improved Extra Early Ohio

A Grand Potato. Our Specialty.

Some early varieties will yield edible Potatoes about as soon as the Improved Early Ohio, but their tops will be green for days after the Improved Early Ohio have fully ripened. The Improved Early Ohio is fully two weeks ahead of the Early Rose, and is a general favorite with Potato growers and Market men alike, and the most profitable Potato they can possibly grow. Maturing early, it brings the highest prices. The tubers grow compact in the hill, are easily dug, with very few small ones—nearly every Potato is of marketable size; has few eyes, which are even with the surface. **Prices, postpaid, 1 lb. 25c; 3 lbs. 60c.**

WE GUARANTEE SAFE ARRIVAL IN GOOD CONDITION FOR PLANTING**

Every farmer knows the heavy expense in sending whole Potatoes long distances by Express or Freight, the charges often costing more than the Potatoes. Then, too, if shipped during the Winter and early Spring they usually freeze, and if not sent until this danger is past, they oftentimes arrive too late for planting. **The Eyes as put up by us, will keep 60 to 90 days in good condition for growing; as if freshly cut from the Potato, and will produce just as good a crop, as if the whole Potato was planted; hence every one who has a garden can order at any time during the Winter or early Spring (no matter how far away) and test the new and choice varieties of Northern-Grown Potatoes we offer, at trifling cost, and Save Express and Freight Charges, as we guarantee safe arrival to any post-office in the United States. BUCKBEE'S "Full of Life" FLOWER SEEDS

ASTERS

This beautiful flower is being constantly improved, and is now one of the most desirable and effective of our garden beauties. As a bedder it is beyond description, and large beds of these lovely flowers greet you almost everywhere. Indispensable for cut flowers, fine as pot plants and alike desirable to show at fairs and exhibitions. They are easily grown, very hardy, and offer themselves for use at a time when other garden favorites are gone, and the select strains we offer cannot fail to give satisfaction to the most critical flower lover.

New Japanese or Tassel Aster.

Buckbee's New Giant Comet Aster

This is the most distinct and improved type of flower in Asters. Under good cultivation plants grow twelve to fifteen inches in height, branching freely, and each stem terminates in a fine large flower from four to six inches in diameter. The outer petals are broad, flat and reflexed and curving outward, while the center of the flower is composed of many short tubular petals, slightly pointed. The whole flower has a distinctly feathery effect, greatly resembling that of the fine Japanese Chrysanthemums. We offer the following separate colors:

Pure White—pkt. 6c; $\frac{1}{8}$ oz. 25c; oz. 90c.

Light Blue—Pkt. 6c; $\frac{1}{8}$ oz. 25c; oz. 90c.

Buckbee's New Giant Comet Aster.

New Japanese or Tassel Aster

Entirely distinct and novel. Plants of pyramidal growth, about eighteen inches high, bearing on long stems from forty to fifty flowers, averaging five inches across, composed of wavy and twisted needle-shaped petals, making the flowers free from the stiff and formal appearance usual to asters. The beautiful flowers of this new strain of Asters offer a most striking contrast with those of any other variety. The color is of a soft flesh pink and rose, the two colors mixed. Pkt. 6c; $\frac{1}{8}$ oz. 35c.

New Yellow Aster

Not a mere indication of the color but the brightest Sulphur Yellow, and the best yellow variety known; the flowers are of large size of a rich golden color, perfectly double and imbricated. Its greatest value lies in its rich color which shows to best advantage when grown with other colors. The flowers are borne upon long, erect stems, excellent for cutting. Pkt. 5c; $\frac{1}{8}$ oz.; 40c.

New Yellow Aster.

Extra Early Hohenzollern Aster

Plants of medium size, extremely early and producing abundantly, blooms of the largest size, fully four inches in diameter. The petals are of open Comet type and unusually graceful in their seemingly careless arrangement. These Asters have the desirable combination of extreme earliness, large size and splendid cutting qualities. We offer the white, also the pink variety.

White—Pkt. 8c; $\frac{1}{8}$ oz. 25c. Pink—Pkt. 8c; $\frac{1}{8}$ oz. 25c.

Queen of the Market Aster

Of graceful spreading habit. Its great merit is its early-blooming character, being in full flower two weeks before most other Asters begin to bloom. Colors range from deep blue, white, pink, to beautiful rose. Finest Mixed. Pkt. 5c; $\frac{1}{8}$ oz. 18c; oz. 60c.

Lavender Gem Aster

One of the finest feathery flowers in the beautiful Comet type. The coloring is an exquisite silvery white when first opening, changing to the most delicate shade of lavender when fully expanded. Pkt. 8c; $\frac{1}{8}$ oz. 40c.

NEW CROWN ASTER

A very showy variety, the large double flowers having the center pure white, surrounded with petals of distinct bright colors, one of the most satisfactory varieties of Asters. Pkt. 6c; $\frac{1}{8}$ oz. 40c.

New Diamond Aster

The flowers are two to two and a half inches across, perfectly double and each petal is distinctly incurved. The flowers are particularly valuable for cutting for bouquets. **Finest Mixed.** Pkt. 4c; $\frac{1}{8}$ oz. 35c.

New Rose Flowered Aster

Plant 24 inches high of pyramidal shape and robust habit. Flowers large, brilliant rose color, very double and regularly imbricated. Pkt. 6c; $\frac{1}{8}$ oz. 40c.

New Crown Aster

Buckee's Giant Branching Aster

The flowers are the most beautifully formed of all large Asters, and quite different in several respects from any Aster known. The branching habit is accompanied with great vigor of growth and profusion of bloom. The flowers are very large, very double, borne on long stiff stems, and the colors are clear and handsome. The petals are of thick durable substance, and, in consequence, the flowers last long in perfection. These magnificent blossoms being gracefully poised on strong, well-leaved stems, 15 to 18 inches long, are unsurpassed as cut flowers for vases and home decoration. We offer the following separate colors:

Pure White—Pkt. 6c; $\frac{1}{8}$ oz. 25c; oz. 90c.

Dark Blue—Pkt. 6c; $\frac{1}{8}$ oz. 25c; oz. 90c.

GLADIOLUS

The Gladiolus deserves a place in every garden, large or small, being of easiest possible culture. They make grand beds and the bulbs can be planted any time during Spring and early Summer.

Buckbee's Famous Rockford Mixed Gladioli

Gorgeous Colors and Marvelous Markings.

We call special attention to our Famous Rockford Mixed Gladioli which have been constantly improved year after year by discarding all undesirable flowers and developing new shades and combinations of colors, including Childs and Lemoinei kinds, with several other choice varieties of which we do not have sufficiently large quantities to offer separately. This mixture also contains a good many rich blue, purple and wine shades, with vivid tints and variations; all splendid flowering bulbs that will make a grand show, and at such a low price that every one can afford a bed of this most popular bulb. Price, postpaid, 4 for 10c; 25c per doz.; 50 for \$1.00; 100 for \$1.75. By express, not prepaid, \$1.25 per 100.

Buckbee's New Frilled and Ruffled Gladioli

Apparently a new and quite distinct strain in form of flower, the border of every petal being conspicuously frilled, crimped and ruffled (see illustration from photograph) which gives to the extra large expanded flower a most chaste and refined appearance. The colors so far noted in our special trial grounds at Rockford are very dainty and striking—rich, delicate cream white, flaked, suffused and blended with numerous shades and markings of lavender, violet and soft canary yellow, with deeper tints and reddish brown markings. While this new and lovely strain does not yet show as wide a range of colors and markings as our other mixtures, it is made up with all our new special select seedlings, giving an average of at least forty per cent. of the true type, and without question the finest and best mixture of delicate light markings and shades ever offered. Price, full-sized Blooming Bulbs, 10c each; 3 for 25c; doz. \$1.00, postpaid.

Kunderdi "Glory" Gladioli

The color is a delicate cream pink, with a most attractive crimson stripe in the center of each lower petal, the shade of which is unique in Gladiolus. The ruffling of the petals has attracted much attention the country over. It is claimed by the grower, who has worked out this type that later on he will have a wide range of colors in this class. He claims distinctness of form, even as the "Spencer" types of sweet peas exceed the old forms. The broadly expanded flowers, paired by twos, all face the same. Price, postpaid, each 10c; 3 for 25c; doz. \$1.00.

Giant Orchid Flowering Gladioli

Flowers Size of Tea Plates.

This new race of extraordinary beautiful Gladiolus represents the perfection of this genus since its introduction. Every color known among Gladioli is represented, many having beautifully mottled and spotted throats, made up of white, crimson, pink, yellow, etc., of unsurpassed beauty. Finest Mixed, 8c. each; 75c per doz., postpaid.

Araucaria Excelsa NORFOLK ISLAND PINE.

The Most Satisfactory Easily Grown Decorative House Plant.

A Grand House Plant—Sometimes called the "Christmas Tree Palm" and "Star Palm." As a decorative plant for the house this is one of the handsomest and most serviceable. It has deep green, feathery foliage, arranged in whorls, rising one above the other at regular distances; its symmetry of form, grace and beauty of foliage, are unequalled. It is so hardy that the dry air, dust and other conditions of the ordinary living room, usually so unfavorable to plant culture, have apparently no deleterious effect upon it. Beautiful Three Layer Plants, postpaid, only 99c; Larger Plants, by Express, not prepaid, \$1.50, \$2.00 to \$3.00 each.

Araucaria

Asparagus Plumosus

THE BEAUTIFUL LACE FERN.

The rare and delicate beauty of this plant can scarcely be shown by a picture or conveyed by a description. The bright green foliage of very delicate texture falls gracefully, giving it a style and air that cannot be surpassed. No more beautiful decorative plant has ever been produced. As a house plant it is deservedly popular, due to the fact that it will thrive under almost all conditions. Strong plants 10c to 15c each, postpaid. Larger plants 25c, 50c, 75c to \$1.00 each, by Express, not prepaid.

Asparagus Plumosus.

Asparagus Sprengeri

Valuable for cutting for fine cut flower work, more particularly in use with large Roses. Grown in suspended pots it makes a very pretty decorative house plant. Strong plants, 10c to 15c each, postpaid. Larger plants, 25c to 50c to \$1.00 each, by Express, not prepaid.

Asparagus Sprengeri.

The Wonder Bedding Plant (Acalpha)

Brighter and More Attractive than Coleus.

AUTUMN TINTS—(Acalpha Bicolor.)—A most wonderful plant, surpassing the finest Coleus or Begonia in the rich color of the leaves, which are beautifully marked with a bright green color margined with a wide irregular band of lemon yellow and having wide yellow bars running lengthwise of the leaf, and also thickly dotted with yellow blotches. Its most important feature is its wonderful qualification for bedding, as it will stand bedding out like a Coleus; in fact, in the sunniest place it produces the highest coloring. 15c each; 2 for 25c.

Wonderful Bedding Plant (Acalpha)

Brazilian Plume Plant

Novel and Beautiful

This plant is a native of Brazil, and of the easiest possible culture, and seems to do equally well in all kinds of soil, and in any situation, requiring but very little attention; it is in fact, one of the few plants that everyone can grow successfully. It is a strong, rapid grower, and throws long shoots, each of which is tipped with the beautiful pink, plume-like flowers, the ends of every petal drooping in a most charming manner. In appearance the blossoms resemble somewhat a mammoth chrysanthemum, but are three or four times as large, and the petals broader and of different formation. It is a grand pot plant, commencing to flower when the plants are very small, and blooming profusely for several months out of the year. 15c each, 2 for 25c.

CHOICE FIBROUS ROOTED "FULL OF LIFE" FLOWERING BEGONIAS

The Flowering Begonias are among our most beautiful and satisfactory flowers for house culture and bedding. They grow nicely, make neat, handsome plants, bloom constantly, and their pretty-wax-like flowers and glossy bright-colored leaves and stems are always greatly admired.

GLOIRE DE LORRAINE

This beautiful new Begonia is the latest novelty in the Begonia family. Its foliage resembles a little that grand old variety, Vernon, rich glossy-green, often shaded deep bronze. It begins flowering during the Summer months, and is a mass of bloom all through the Winter. Flowers, when first opening, are bright cherry, changing to a clear coral-red. It thrives everywhere and is destined to become a leader among all the Begonias. Each, 15c. Larger Plants, each, 25c.

OTTO HACKER

In a class by itself. A strong, vigorous grower, of fine upright habit, with large shining deep green leaves eight to ten inches long. Flowers bright coral-red, borne in immense clusters eight to ten inches across. Each, 15c.

Thurstoni.

ROBUSTA

This is one of the most peculiar Begonias grown. The stock, stem and under side of the leaf are Indian-red; the upper side of the leaf glossy olive-green. The petals are almost pure white, a distinct pink stripe in the center of each, enlivened with golden anthers; borne in clusters, and with the coral red buds form a most elegant and chaste appearance. Each 10c; 3 for 25c.

RUBRA

One of the finest Begonias in cultivation. Its dark, glossy-green leaves, combined with its free-flowering habit, make it one of the very best plants for house or conservatory decoration. The flowers are a scarlet rose-color. Each 15c; 2 for 25c.

THURSTONI

This Begonia is a cross between Metallic and Sanguinea having the bright red foliage and veining underneath the leaves, and bright green shading to red in the younger growth on top. The flowers are a beautiful deep pink in bud, but when expanded become a shell-pink. Each, 15c; 2 for 25c.

Special Offer The full set, one each of the 5 Flowering Begonias on this page, for 75c, postpaid.

ARGENTEA GUTTATA

It has pure-bronze leaves, oblong in shape, with silver markings and is in every way a most beautiful Begonia. It produces white flowers in bunches on ends of growth stems. Each 15c; 2 for 25c.

MULTIFLORA

Makes beautiful plants for pots or bedding, graceful drooping branches, covered with bright rosy-pink flowers. Very free-blooming. Each, 10c; 3 for 25c.

METALLICA

This elegant variety has very large glossy leaves shaded with green, crimson and olive, with a peculiar metallic lustre over all. Flowers large, rose or pinkish white. It is one of the most popular, desirable and showy varieties in cultivation, and should be in every collection. Each, 15c; 2 for 25c.

BUCKBEE'S BEST FERNS

FOR HOUSE CULTURE

New Crested Fern.

The New Crested Fern (Whitmanii)

We think this the most popular Fern. Rather dwarf in growth, but graceful, very compact, dense and feathery. Each frond or branch has a double row of perfect little fronds set at right angles to the mid-rib, and so thick they seem almost crowded. It is a healthy, vigorous grower, constantly unfolding fresh fronds of light green that contrast exquisitely with the deep green of the older fronds. It is somewhat like Bar-

rowsii, but decidedly more fluffy, more delicate and beautiful. Fine young plants 15c, 25c and 35c each, postpaid. Larger plants 75c, \$1.00, \$1.50, to \$2.00 each, by Express, not prepaid.

New Roosevelt Fern.

New Roosevelt Fern The Greatest Fern of the Age.

In general characteristics it resembles the Boston Fern, but it produces many more fronds, making it a bushier and handsomer plant; then the pinnae are undulated, giving it a pronounced wavy effect seen in no other Fern. The Boston Fern Nephrolepis Bostoniensis.

This is one of the old standbys, and still one of the best. Its long, graceful drooping fronds often attain a length of five or six feet in a single year. Fine young plants 10c, 15c and 25c each, postpaid. Larger plants 50c and \$1.00 to \$1.50 each, by express, not prepaid.

BLACK PRINCE—This is, without question, the very finest Fuchsia grown for the amateur to cultivate. It makes a shapely bush, is robust in growth, free from disease and insects, and is probably the freest in blooming. Blossoms of a beautiful waxy-carmine or pink color. Certainly a plant for easy culture. 10c each, 3 for 25c, postpaid.

It continues growing and branching in this way until the vines are a solid waxy mass of the most elegant foliage and perfect flowers. The flowers are borne in large, drooping clusters; very large, long, graceful. 15c each, 2 for 25c, postpaid.

THE BEAUTIFUL TIGER HOUSE PLANT

Sanseveria Zealanica.

A New Decorative Plant of Great Value.

There is scarcely a decorative plant listed that is more striking in foliage and habit than this, and certainly none other that will stand as much downright neglect and hardship. Nothing but frost or a continual drenching with water has terrors for it. It will grow in a dark hall, a cool bedroom, or stand on the mantel in a heated sitting-room. It will stand gas and dust, and will go for months without a drop of water, yet remain as thrifty as ever. Singularly beautiful, as well as easily grown. Erect, rigid, sword-like leaves, in some old specimens reaching a length of from four to six feet. The leaves are thick and fleshy, a dark green color, with clouded bars of white. In May and June it sends up long plummy flower spikes, which, in their soft, feathery whiteness, remind one of an Agave's flower. The splendid outlines of this plant, together with its distinctive marbling, make it a superb plant for jardinières, centers of vases, etc. It will also grow splendidly out of doors in Summer. Just the plant for sunless windows or halls, where nothing else will grow. It is new and little known to cultivation, but a plant which all will delight to possess. Fine plants, postpaid, each 15c, 2 for 25c. Larger plants by Express, not prepaid, 50c to \$1.00 each.

Crimson Baby Rambler Rose.

3 Fine BABY RAMBLER Hardy Roses

Baby Rambler, or Dwarf Crimson Rambler

A dwarf Bush (not climbing) form of Crimson Rambler, and, furthermore, everblooming. It forms compact bushes about two feet high when fully grown, and is fully covered with clusters of its rich crimson-red flowers throughout the season. Perfectly hardy, it requires no winter care, and should improve each year with good culture. The coloring is brighter than "Crimson Rambler" of which it is a seedling. The size of the clusters and the number of flowers in each are the marvel of all beholders. Its use is varied so as to render it invaluable. As a bedding variety to make a low, attractive hedge, to border a walk, for planting in cemeteries, or for growing in pots in the house, it stands alone and must find its way everywhere. Remember it is hardy and perpetual flowering. Fine plants, postpaid, 15c each, 2 for 25c. Large 2 yr. old plants, 35c each.

Baby Dorothy, The Pink Baby Rambler

The freely branching plants attain a height of about 24 inches, somewhat similar to the Red Baby Rambler, the numerous flower stalks containing fifty to sixty flowers and buds at one time. Flowers cerise pink, measuring 2 inches in diameter, with a double row of twisted petals; center chrome yellow. Perfectly hardy. Fine plants, postpaid, 15c each, 2 for 25c. Large 2 yr. old plants, 35c each.

The White Baby Rambler (Catherine Zeimet)

This is surely a beauty and a great addition to the Baby Ramblers. It grows to a height of twenty inches, and produces double pure white flowers in abundance. Of free compact growth and very attractive. Produces a sheet of white color. Fine plants, postpaid, 15c each, 2 for 25c. Large 2 yr. old plants, 35c each.

Special Offer C-6. The set of 3 Baby Rambler Roses, postpaid, 35c, or the set of 3 larger 2 yr. old plants, one each of the 3 varieties, for only 90c.

THREE GRAND NEW CLIMBING ROSES

Flower of Fairfield

THE EVER BLOOMING CRIMSON RAMBLER

The Most Wonderful Garden Rose Introduced for Years.

For many years past it has been the endeavor of every Rose grower to produce a climbing variety that would be of perpetual flowering habit. The many beautiful varieties of Rambler Roses were valuable acquisitions, but none of them could be called perpetual or everblooming; they producing only one crop of flowers during the season. The Flower of Fairfield, however, is correctly termed a perpetual blooming variety. It commences flowering in

the Spring or early Summer and produces repeated crops of bloom until late in the Autumn. It is a sport from the famous Crimson Rambler; it is of the same color, if not a shade more brilliant, and has better resisting power to the sun. Flower of Fairfield blooms very profusely on young wood the first year after planting. It is very effective for covering walls, trellises or arches, and is equally attractive for table decoration or other uses as cut flowers. It has been taken up very enthusiastically by the florists in both Europe and this country, and we anticipate a demand that will far exceed the available supply this season. Strong plants, 15c each; 2 for 25c, postpaid. Large 2 yr. old plants, 30c each.

Charles Keim, Steele, N. Dak., writes: "I want to thank you for your valuable book, 'How to Grow Seeds and Flowers.' It is a valuable book to me."

New Hardy Climbing Baby Rambler

A new member of the Climbing Rose class, with all the freedom of bloom and bright coloring. The past year, this climbing "sport" has proven very attractive, vigorous in growth and with a continuous show of bright colored bloom, clusters fully as large as those of Baby Rambler, produced all through the summer. The foliage is bright green, thick and healthy, not so liable to mildew as the old Crimson Rambler whose unsightly foliage has been cause for annoyance to every Rose lover. Strong young plants, 15c each; 2 for 25c; 2 yr. 35c, each.

THE BLUE ROSE

VEILCHENBLAU, or VIOLET-BLUE
NEWEST CLIMBING ROSE

"THE SENSATION OF THE CENTURY."

After years of effort rosarians have been rewarded by the production of a blue Rose, which will be welcomed with the greatest interest by all lovers of the garden. This new climbing Rose surpasses all others of recent introduction in having a pure blue color. The flowers appear in large clusters after the manner of the Crimson Rambler, are semi-double and of medium size. Upon first opening the color is partly bright red and partly bright rose, turning soon to a steel blue. The color is best described by saying that it resembles that of early violets. This variety is a strong grower, has shining green foliage and few thorns. It has not been troubled by mildew and is classed among the hardiest Climbing Roses, withstanding the Winters very successfully. Be the first in your neighborhood to grow this grand new novelty and truly genuine blue Rose; the true stock of which is very limited. We urge that you place your order early as possible as it is very evident the demand will far exceed the supply. Strong plants, 15c each; 2 for 25c; postpaid. Large, 2 yr. old Plants, 30c each.

CHOICE HARDY ORNAMENTAL SHRUBS

No flowering plants are more worthy of cultivation than shrubs and none can be cultivated more easily.

The first cost is the only cost, and the plants greatly increasing in size and beauty year after year, make an investment which yields an annual dividend of loveliness not to be computed in any ordinary way.

MAGNIFICENT NEW HYDRANGEA

"HILLS OF SNOW"

Immense snow white panicles of blooms, literally covering the bush; absolutely hardy, standing 20 degrees below zero without the least injury.

This magnificent, hardy American shrub is the finest addition to this class of plants found in many a year. The heads of blooms, which are of large size and pure snow-white color are produced in marvelous profusion covering the bush with a magnificent mass of glistening pure white flowers. The foliage is finely finished, lacking entirely that coarseness found in so many of our best known shrubs. One of the most valuable characteristics is its coming into bloom just after the passing of all the early Spring shrubs; while its long season, from early June, through September, renders it doubly valuable, not only to the florist for cut-flowers, but also to the owner of a garden—as there is no shrub so grandly decorative. The large heads of bloom are superbly attractive, and the habit of the plant is excellent. This splendid hardy shrub is bound to become most widely grown just as soon as its great value becomes known. We have a fine stock of this valuable shrub growing and can offer them to you at the following very reasonable prices: **Strong Plants, postpaid, each 15c; 2 for 25c; doz. \$1.35. By Express, not prepaid, Larger Plants, each, 35c; doz. \$3.50; or, Extra Large Plants, each, 50c; doz., \$5.00.**

HYDRANGEA—Paniculata Grandiflora

THE MOST POPULAR OF ALL HARDY SHRUBS.

Hundreds of thousands of them are sold every year and the demand is constantly increasing. Unsurpassed for the lawn, a hedge, or for cemetery planting. It readily attains a height of 5 to 7 feet; hardy in all localities, needs no protection in Winter; blooms the first and every season in July and August and continues to bloom for two or three months; the flowers are massive, cone-shaped, sometimes ten inches in length, and changing from the original pure white to pink, and finally to a beautiful rich coppery red. **Fine Plants, postpaid, each, 10c; doz. \$1.00. Larger Plants, by Express, not prepaid, each, 25c; doz. \$2.50. Extra Large Plants, each, 35c; doz. \$3.50.**

Everblooming Fragrant Butterfly Bush

A Show Plant for Every Garden, Perfectly Hardy

This shrub, from a young plant, will grow to its full size and maturity in less than three months, giving the grower the opportunity to admire all its features the very first year. Its growth is instantaneous, branching directly above the ground into many long, graceful flowering stems, which attain a height of 4½ ft. and terminate with long tapering panicles of claret colored flowers. The individual flowers, which are of miniature size, resemble that of a Lilac, but are borne by the hundreds on a single stem so that the flowering part extends from 6 to 8 in. long. A single plant will bear at one time from 12 to 18 of these flowering stems, and the most remarkable feature is that these are produced uninterruptedly from early June till the snow flies. A remarkable attribute is the incomparable fragrance, of which it's like we know no other. The fragrance of a single plant will perfume the air of a large garden the entire season. The foliage is not less attractive, being deep green on the surface and silvery gray underneath, of elongated form and decks the stem from the ground to crown. During the Summer this plant is a Mecca for butterflies, fitting to and fro, giving animation to an otherwise dead garden, and it is for this reason alone it is named the "Butterfly Bush." **Price, strong, thrifty plants, 20c each; 3 for 50c, postpaid.**

NEW

GIANT HIMALAYA BERRY

**THE
GREATEST
FRUIT
INTRODUCED INTO AMERICA
FOR A GENERATION**

It is entirely a new kind of Berry-fruit—just as different from anything you have ever seen or tasted as Raspberries, Blackberries or Strawberries are different from one another, and is therefore, in a distinct class by itself. A proper comparison cannot be made between Himalaya Berries and any other grown in this country, either in character, and hardiness of plant, or in quality, and abundance of fruit. The berries are black, but are not blackberries. They are borne in enormous clusters, and ripen from time to time all summer, and on in the fall till frost comes. Each berry is an inch long, thick, meaty, melting, sweet, with almost no core, and unusually rich. They need very little sugar in cooking, and do not spoil for many days after they are ripe when left hanging on the vine. They will stand long-distance shipping and much handling without loss of fine flavor and appearance. The sprouts do not come up from the ground as blackberries do, but all start from one root. When a year old and afterward, the canes send out fruit laterals which get to be sixteen to forty feet long, and upon these are borne the enormous crops. The berries are clustered on the outside of the bush, not in among briars, where they would be hard to pick. Plants are as hardy as an oak. No temperature in North America will hurt them in the least, and hot, dry weather does little else than make them thrive. If the soil is kept moist, the hotter the sun shines the faster they grow.

TWO GRAND AND MAGNIFICENT CHERRIES

Rocky Mountain Cherry

ONE OF THE GREATEST NOVELTIES IN THE FRUIT LINE EVER INTRODUCED
It bears fruit every year and is as prolific as a currant bush. 16 quarts having been picked from a 3-year old tree.

The fruit is a rich red and changes to almost black when ripe, of good size, fine flavor and unsurpassed for preserves or eating from the hand; season of ripening being after all others are gone. In flavor it is akin to the sweet cherries, and has no equal in the line of pitted fruits. Price, 15c, each, or 3 for 35c, postpaid.

Compass Cherry

Absolutely Hardy Everywhere
Originator's description: "This cherry was originated at Springfield, Minn. It is a cross between the Sand Cherry and the Miner Plum. Nearly an inch in diameter, a bright red, sweet and juicy and of very fine flavor. The original tree bore fruit the third year from the seed and has borne a full crop every year since. The tree is a regular and heavy bearer and produces fruit the next year after setting out. For exposed situations and for the North and West it is the "Cherry." Requires no protection whatever and is in every particular as Hardy as an Oak. Mail size, postpaid, each 35c, 4 for \$1.00. NOTICE—Our Full of Life Small Fruits are Northern Grown. Thoroughly Acclimated and well adapted to Every Section of the United States.

HARDY ORNAMENTAL HEDGE PLANTS

Beautify your surroundings! Remove the unsightly fence; enhance the value of your property by planting a Hedge.— Nothing can be more beautiful than ornamental hedges, well kept and pruned, to serve as a boundary line between neighbors, or as a division between the lawn and garden, or to hide unsightly places. Beautiful Hedges add so much to the appearance of a property, and are, everywhere, coming into more general use. They look better than fences, last longer and cost less; when once established, they require only a little cultivation and pruning each year to keep them the desired shape and size. A fence is more trouble, a hedge grows better looking every year. (These plants are also used for individual lawn specimens.)

JAPANESE ROSE HEDGES (Regosa Rose)

Roses are coming to be more and more popular for hedges. They are perfectly hardy in the coldest Winters and are especially valuable because the foliage is never troubled with either insects or disease. Price by express, not prepaid, \$3.00 per doz. for strong 3 year old plants. Extra fine 5 yr. old, 50c each; \$5.00 doz.

Japanese Barberry (Berberis Thunbergii)

This is the most valuable for making a low dwarf hedge. It is of low, regular and compact growth and requires very little pruning. It has fine thorns and small round rich green leaves that change color in the Autumn to a fiery crimson. The hedge is made still more beautiful by great numbers of pretty drooping yellow flowers which are followed by bright red berries. It is frequently planted singly, and is one of the handsomest flowering shrubs we have. Strong plants, postpaid, each, 10c; doz. \$1.00. Prices by express, not prepaid, select plants 12 to 15 in. high, \$1.25 per doz.; \$6.00 per 100, 15 to 20 in. high, \$1.50 per doz.; \$7.50 per 100.

California Privet (Ligustrum Ovalifolium)

This is one of the most popular hedge plants, grows very fast, bushy, compact and very hardy. For groups and specimens it is equally pretty, and its shining leaves give it value for porch and terrace decoration when grown in standard form. Can be sheared to any desired shape. Price, good strong plants, postpaid, each, 10c; doz. \$1.00. Prices by express, not prepaid, select plants 15 to 18 in. high \$3.00 per 100; 18 to 24 in. high \$4.00 per 100.

HOW TO PLANT If the plants are to be in a single row, set them about 12 inches apart; if in a double row, about 18 inches apart, each way and alternately. The single row is very effective, but naturally the double row makes a wider and denser hedge.

PLANT CATALPA TREES FOR PROFIT

Excels for building material—makes good fence posts—nothing better for telegraph poles—good plow beams and handles, superior to oak for furniture—lighter than pine—stronger than oak—tougher than hickory—neither shrinks or swells.

The Catalpa is one of the hardiest and most easily transplanted of all our common trees. Any soil that will grow farm crops will grow Catalpa trees. An acre of Catalpa trees properly cultivated and cared for, will take no more labor than an acre of corn, and after three years this acre is growing into more value each year than an acre of corn, with no labor at all. Start a grove of Catalpa trees this year and you will be more than pleased with the result. Nearly every farm has some waste land that could be used for this purpose.

SPECIAL PRICE Catalpa Speciosa trees 8 to 10 inches, \$1.00 per 100 postpaid. Large Catalpa 5 to 7 feet, 25c each or 5 for \$1.00 by express at purchaser's expense.

WARNING The True Catalpa Speciosa is scarce. Even if you don't trade with us, be sure you buy the genuine stock and not "Catalpa Bignonioides" and other common varieties, which are only scrub trees and worthless for almost any use.

Catalpa Speciosa.

TREE SEEDLINGS

Well Rooted, Nursery Grown.

They are intended for planting groves, tree claims, wind breaks, etc. Lumber and posts are becoming more expensive every year, and people could save a great deal of this expense by planting some of the quick-growing forest trees. Nearly every farm has some waste land that could be used for this purpose. At prices quoted, sent by express at purchaser's expense. If wanted by mail postage must be added 35c extra per 100.

WITLOOF CHICORY OR FRENCH ENDIVE

The Famous Winter Salad

A delicious winter vegetable which is really a variety of Chicory, but is sometimes called French Endive. Forms leaves like Cos lettuce and can be eaten raw as salad or boiled. Being available in winter will make a profitable crop. It can be easily grown by any one. The seed should be sown in the open ground not later than June. In drills twelve to eighteen inches apart, thinning out the plants so that they will stand not closer than three inches. The plant forms long paraisip-shaped roots and these should be lifted in the fall cutting off the leaves and then store in soil in a cool place until wanted for forcing. The roots should be planted in a trench sixteen to eighteen inches deep and placed upright about one and a half to two inches apart. It requires about one month to force the roots and the heads are cut off with a small portion of the root attached. Pkt. 5c; oz. 18c; 2 oz. 35c; 1/4 lb. 60c.
